MNL visits over time — where to add demo capacity

Coverage

576 dated visits from Jan 04, 2024 to Jun 30, 2026. 2024: 289. 2025: 220. 2026 (January–June): 67. Use the peaks to roster associates, and compare years only on months every file contains.

Gaps

Every month from the first visit through the last visit has at least one record. Partial coverage: 2026 (January–June). Later months are not in the file and are not plotted as zero.

Solution topics

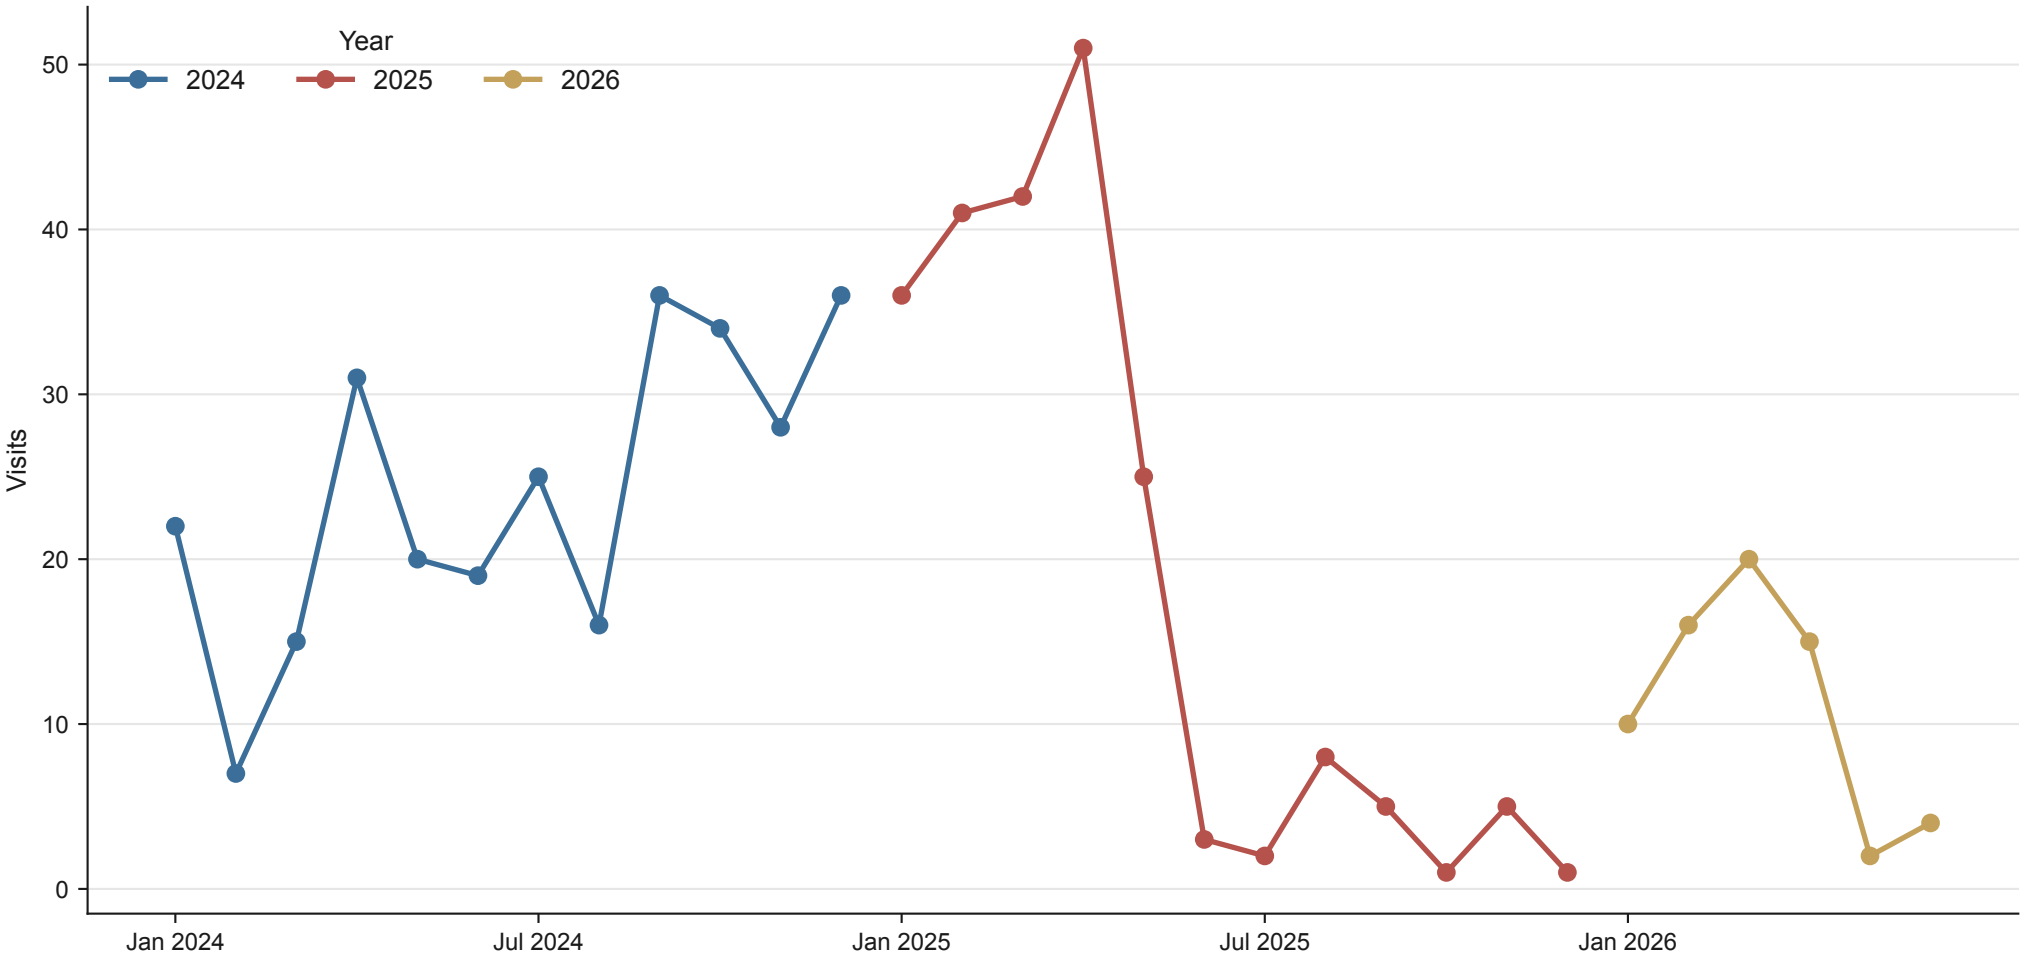

Each panel is a solution clients ask to see, including AI Tools. A visit can appear in more than one panel.

MNL VISITS

Monthly visits — when the bench needs more associates

Jan 2024 through Jun 2026. Partial coverage: 2026 (January–June). Later months are not in the file and are not plotted as zero.

IMPLICATION

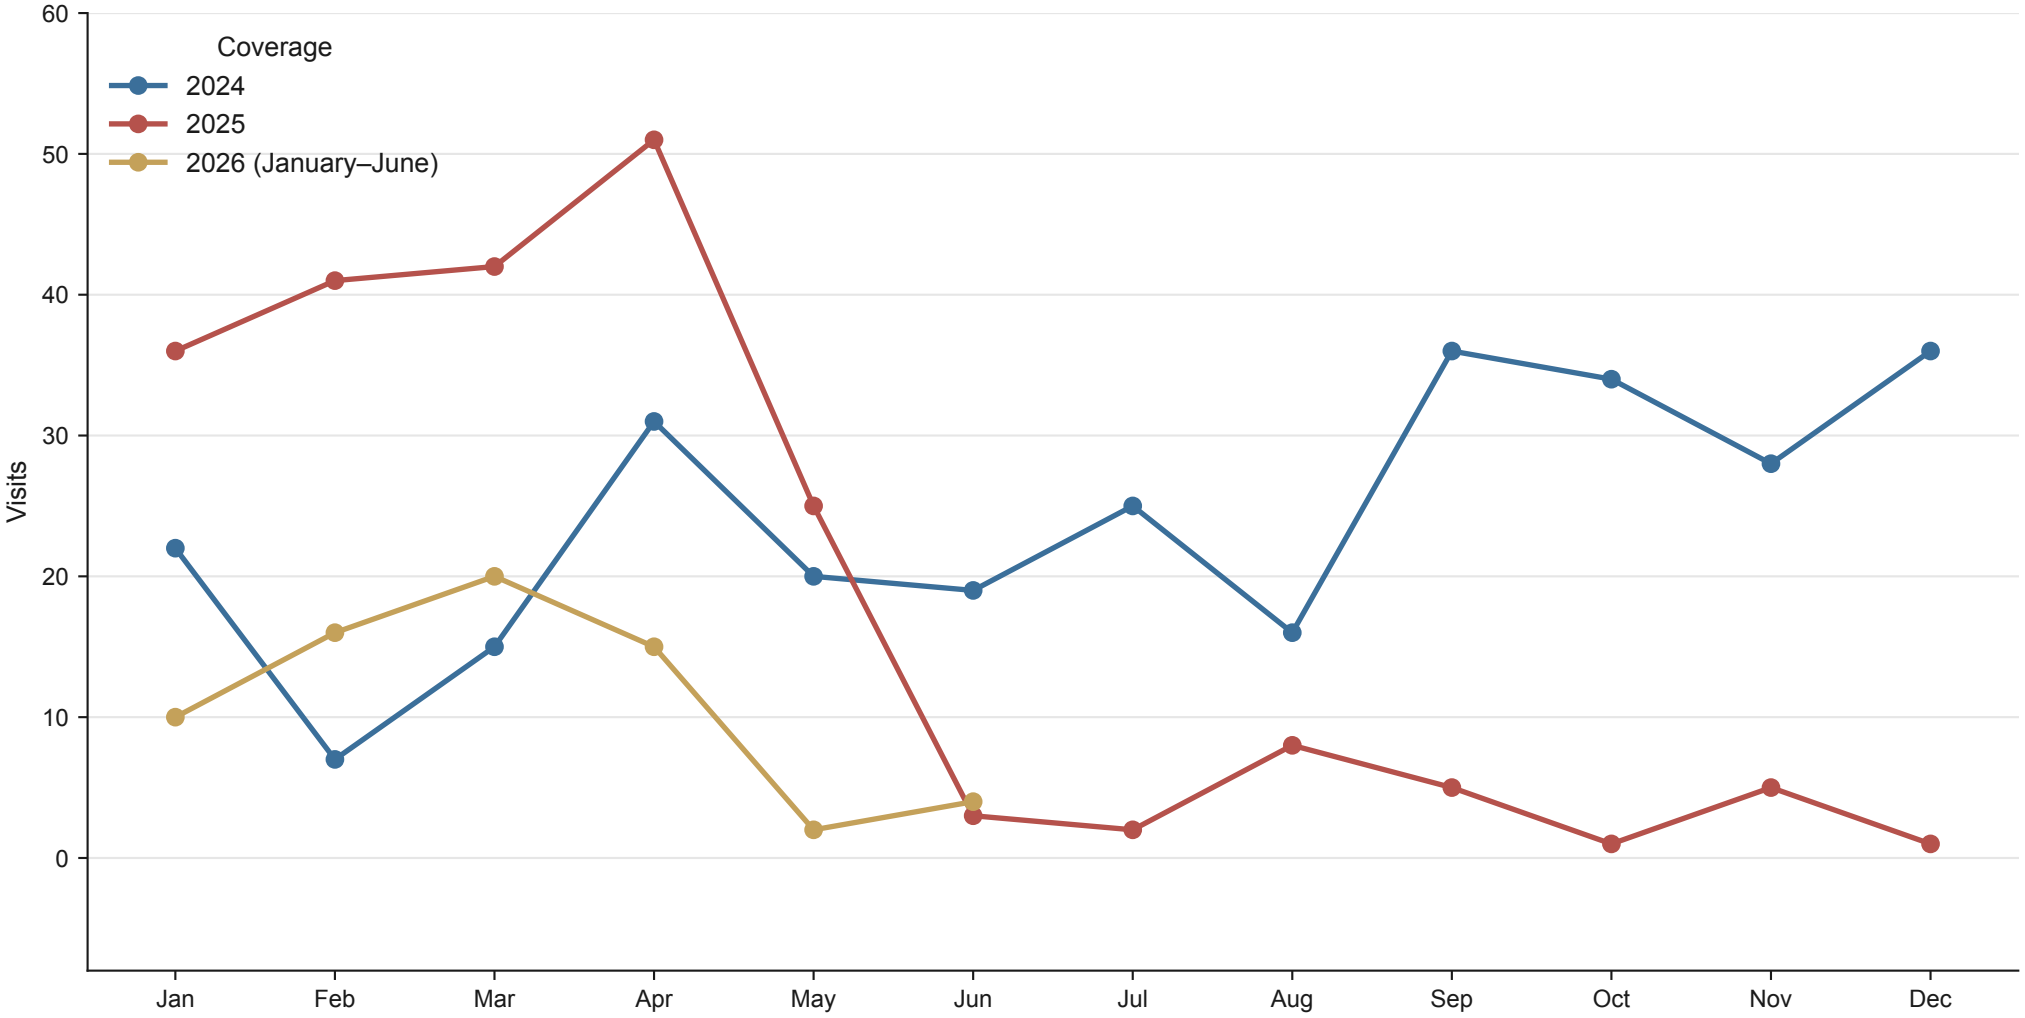

Roster extra associates onto the peaks. Each color is one year. A break inside a year is a month with no logged demo, not a month plotted as zero.

MNL VISITS

Same month across years — the window for the demo target

Each line is one calendar year and stops where that file stops. Compare January–June when FH1 2026 is in the set.

IMPLICATION

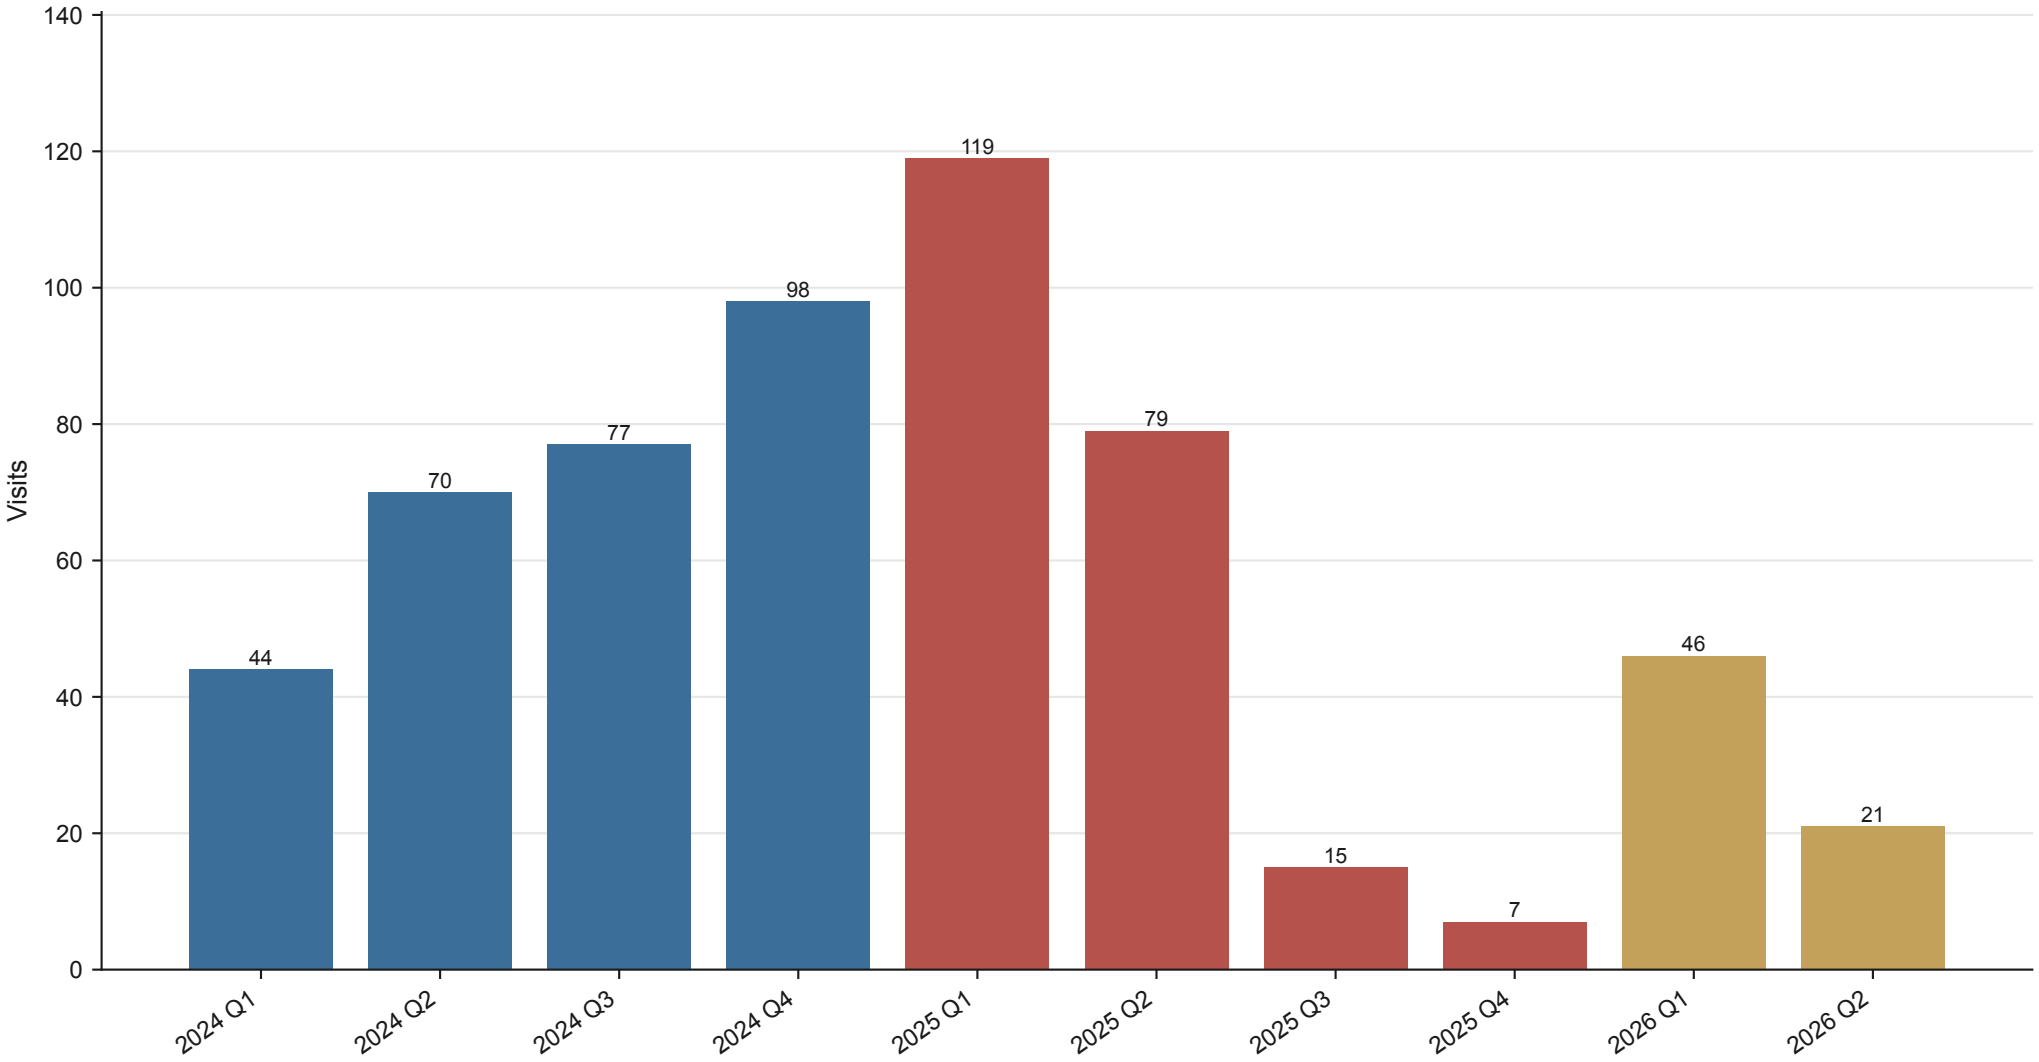

Publish the next demo target on the months every year contains. Do not score FH1 2026 against a full year.

MNL VISITS

Quarterly visits — where demo capacity is already tight

Only quarters with at least one visit are shown. A missing quarter was not in that file.

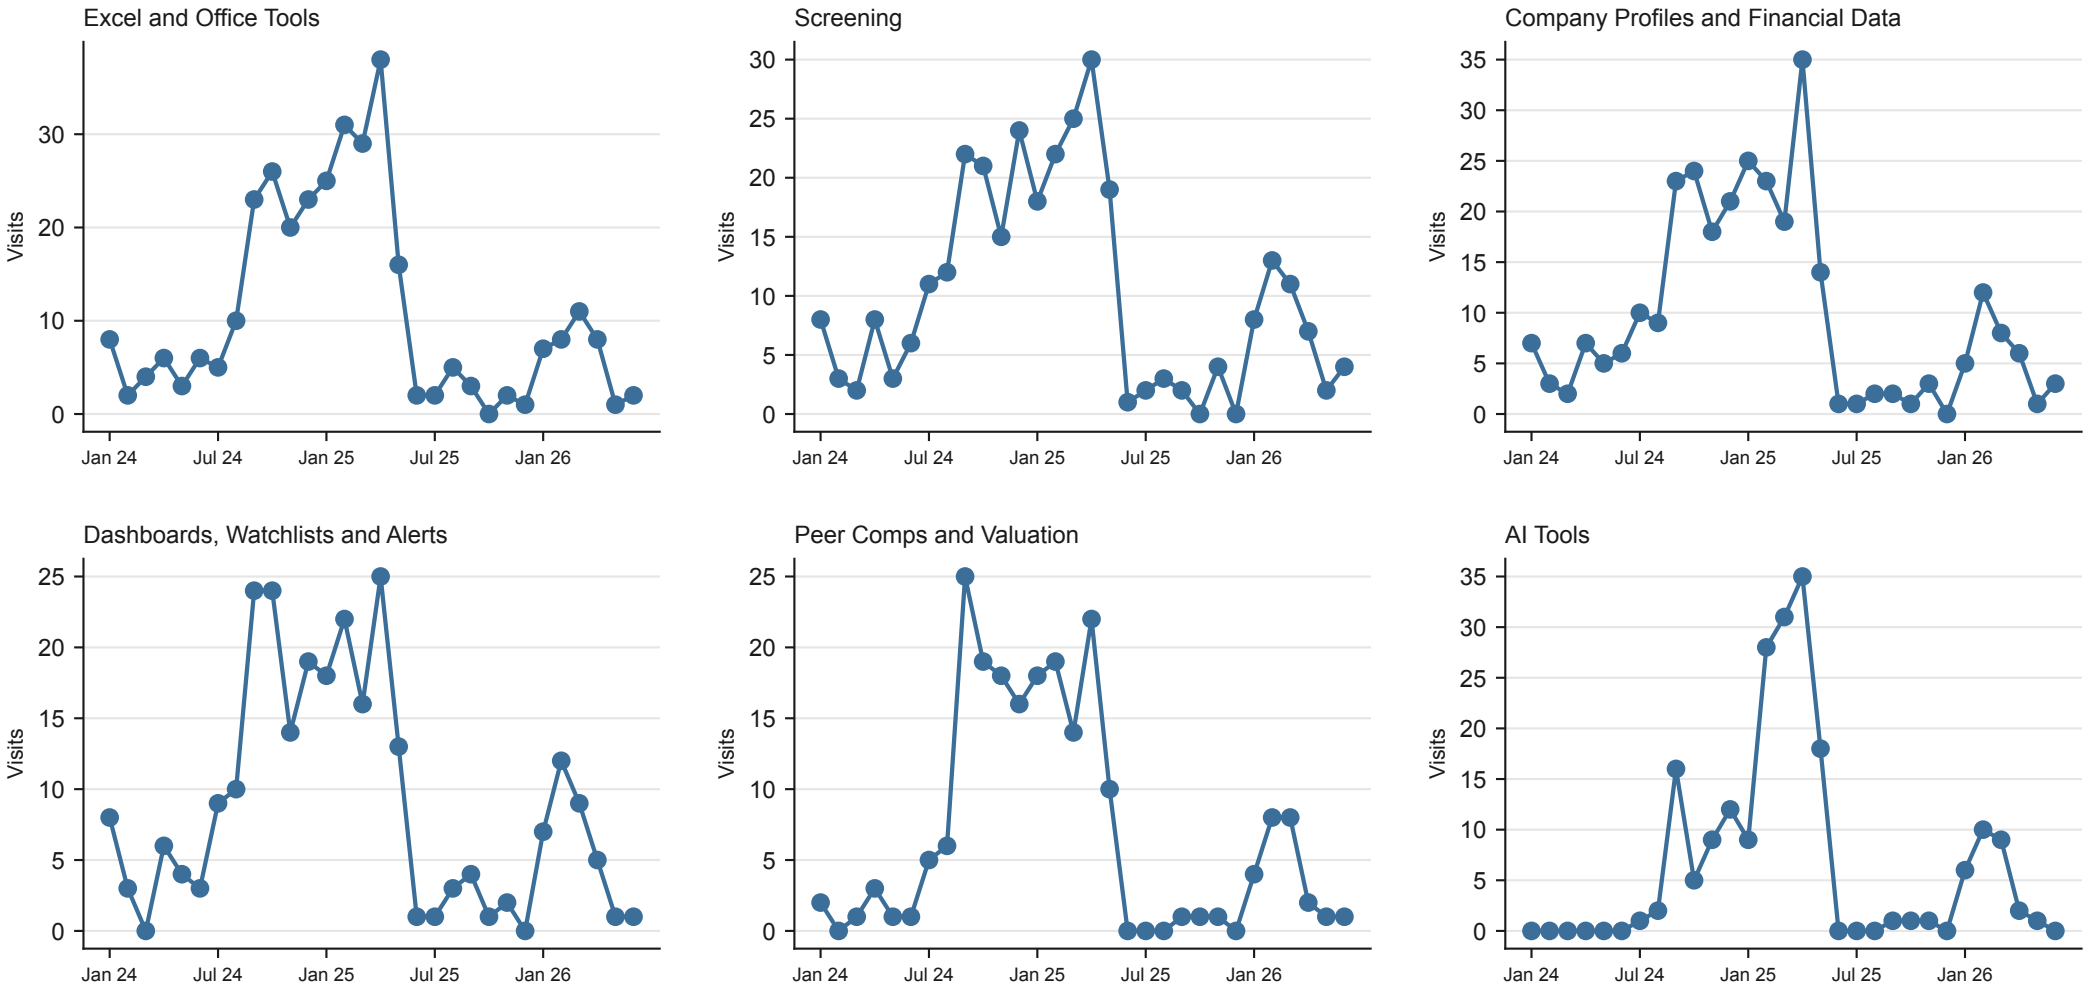

IMPLICATION

Partial coverage: 2026 (January–June). Later months are not in the file and are not plotted as zero.

Solution topics over time — what to keep in product training

Each panel is one solution topic. A month with visits but no mention of that topic is zero. A month with no visits breaks the line.

IMPLICATION

Train the modules that stay in the requests, including AI Tools. Associates who can show them can take the next demo.
