2025

RECORDED VISITS

67

2026 (January–June)

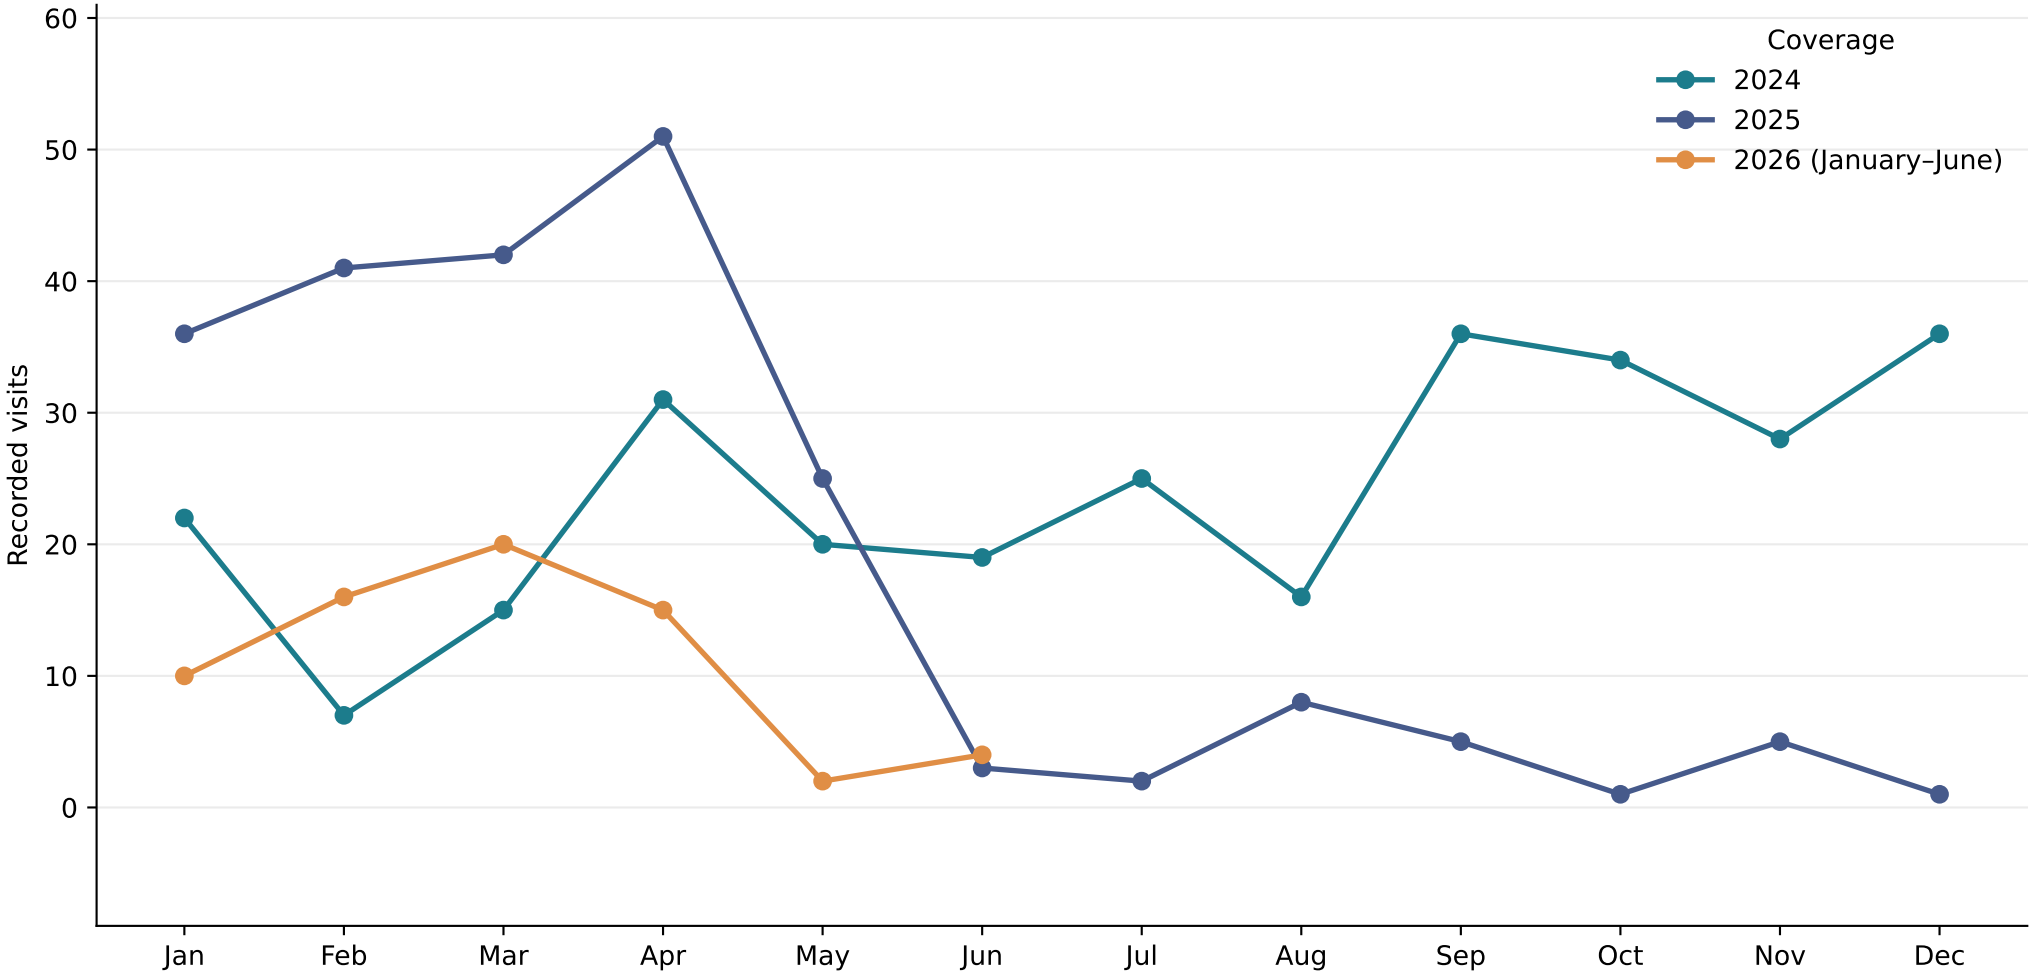

Compare months that appear in every year. A partial year is labeled with its months and is not treated as a full year of zero activity.

Rows are logged visits, not unique clients. Topic and workflow bars can overlap.

Source: cleaned Manila visit files grouped by the visit date.

Read the months that were actually logged

Dated visits are 289 in 2024 (January–December); 220 in 2025 (January–December); 67 in 2026 (January–June). Each line is one year, and a month with no visits in that year is not drawn.

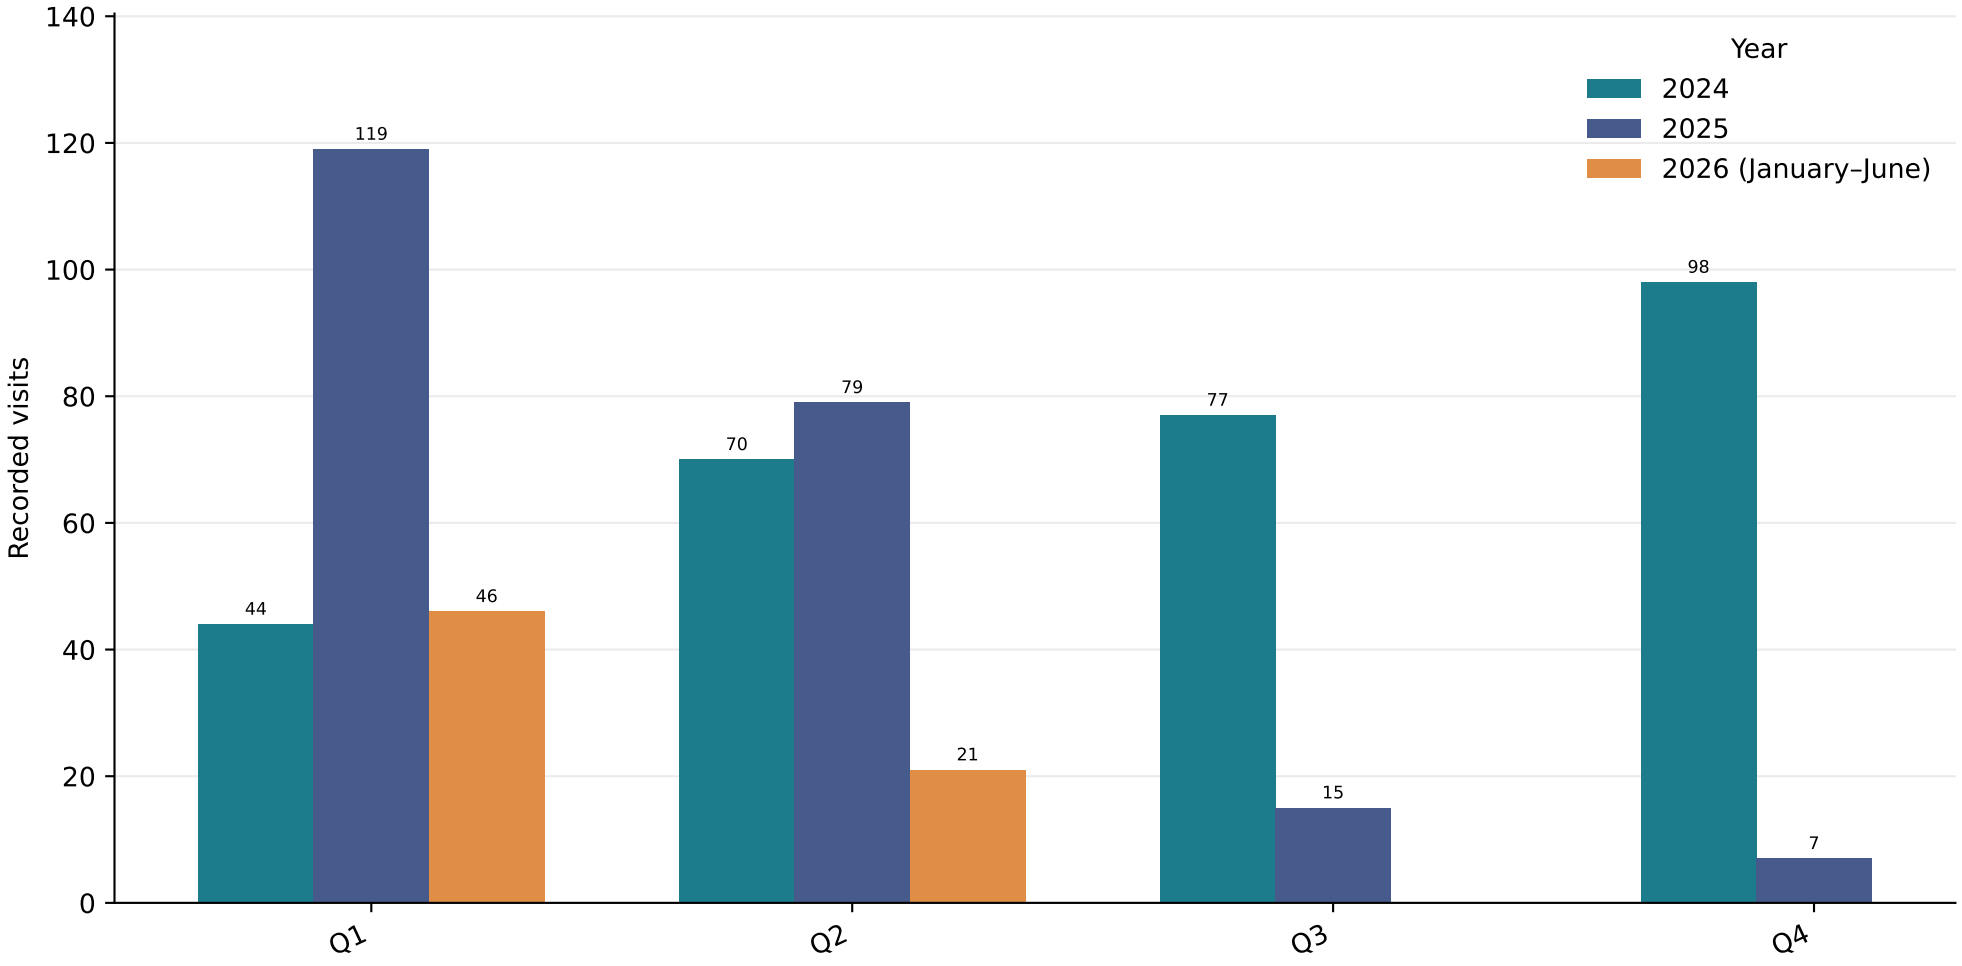

The months present in every year are January–June. Recorded visits in that window are 2024: 114; 2025: 198; 2026: 67. Months that are absent from a file are omitted, not plotted as zero. 2025 is front-loaded: 198 of 220 visits (90%) fall in January–June, and 22 fall in July–December. 2026 (January–June) is not a full-year total.

Quarterly cadence, with missing quarters left out

Recorded visits by quarter are 2024: Q1 44, Q2 70, Q3 77, Q4 98; 2025: Q1 119, Q2 79, Q3 15, Q4 7; 2026: Q1 46, Q2 21.

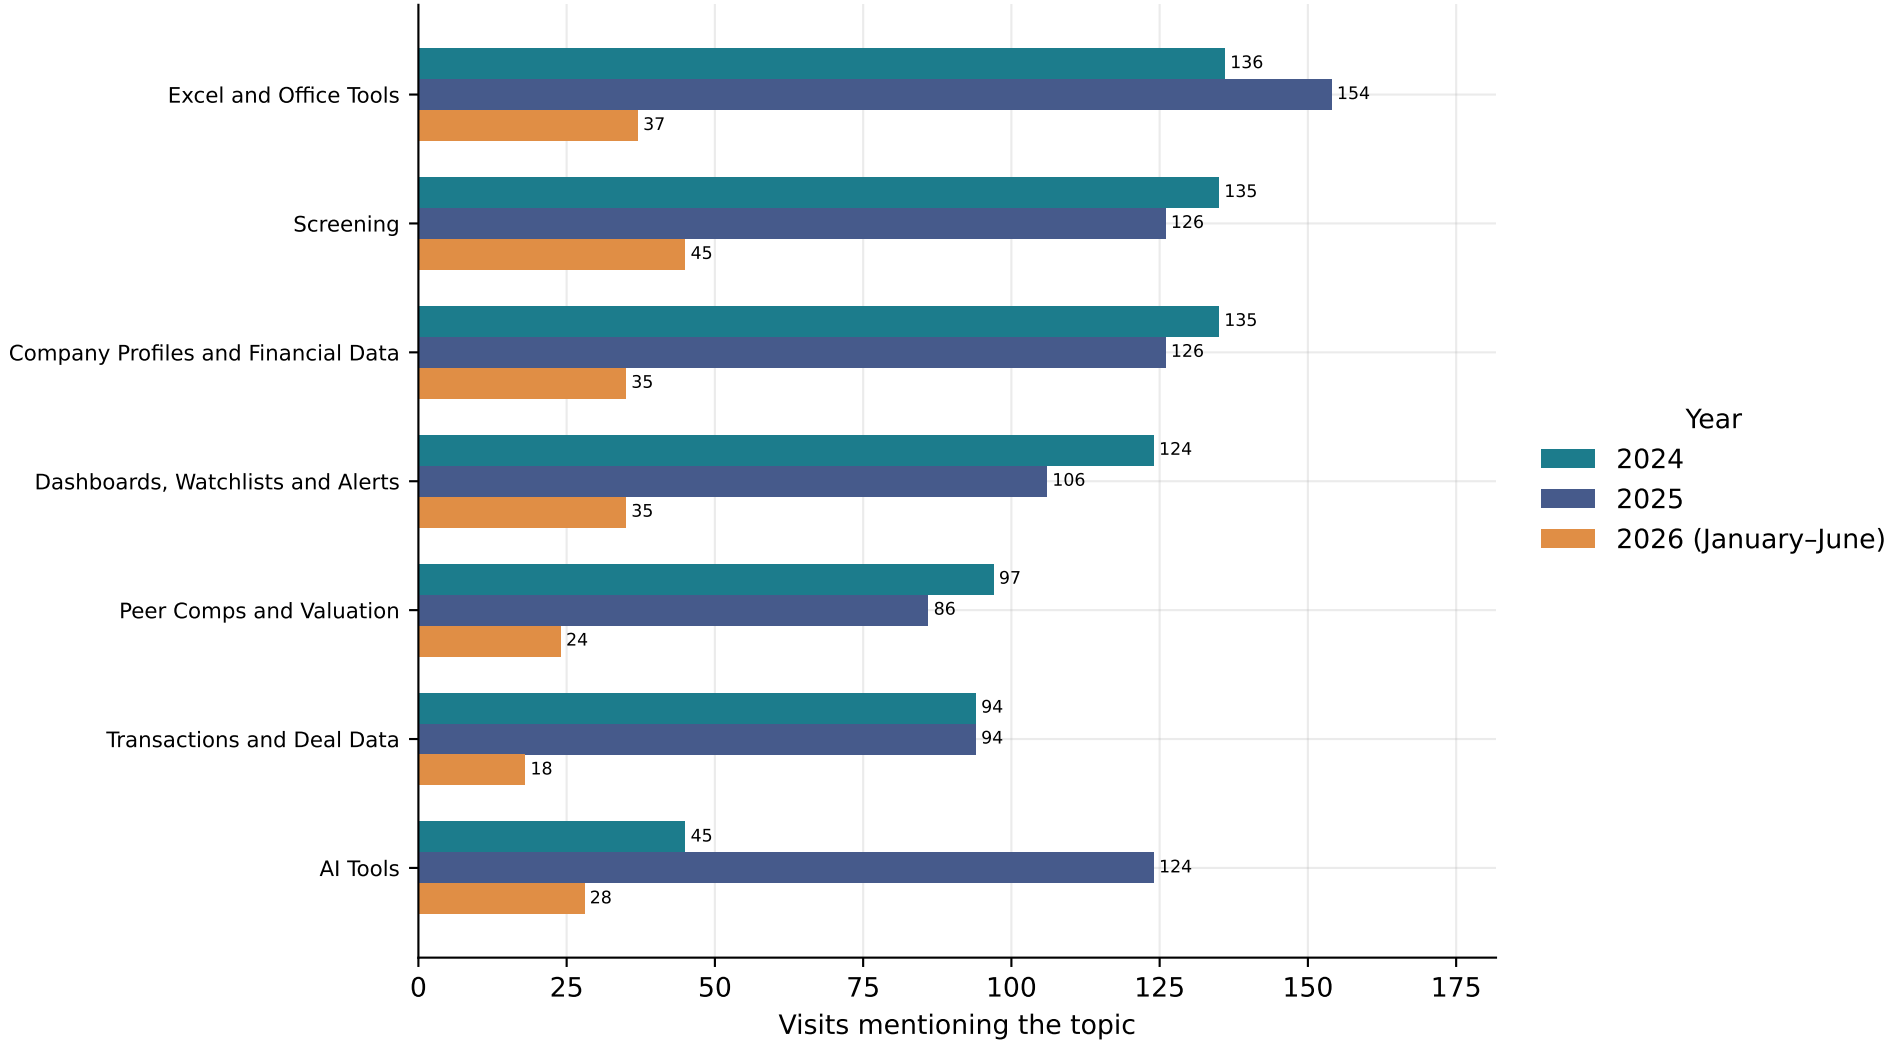

2025 Q1 (119) is larger than Q3 and Q4 combined (22). 2026 has no records in Q3, Q4, so those quarters are omitted. A change in logged quarters is not, by itself, a change in client demand.

Solution topics mentioned in the visit notes

The most mentioned solution topic in each year was 2024: Excel and Office Tools (136); 2025: Excel and Office Tools (154); 2026: Screening (45). One visit can match several topics. Notes that matched no topic: 13 in 2024, 8 in 2025, 2 in 2026.

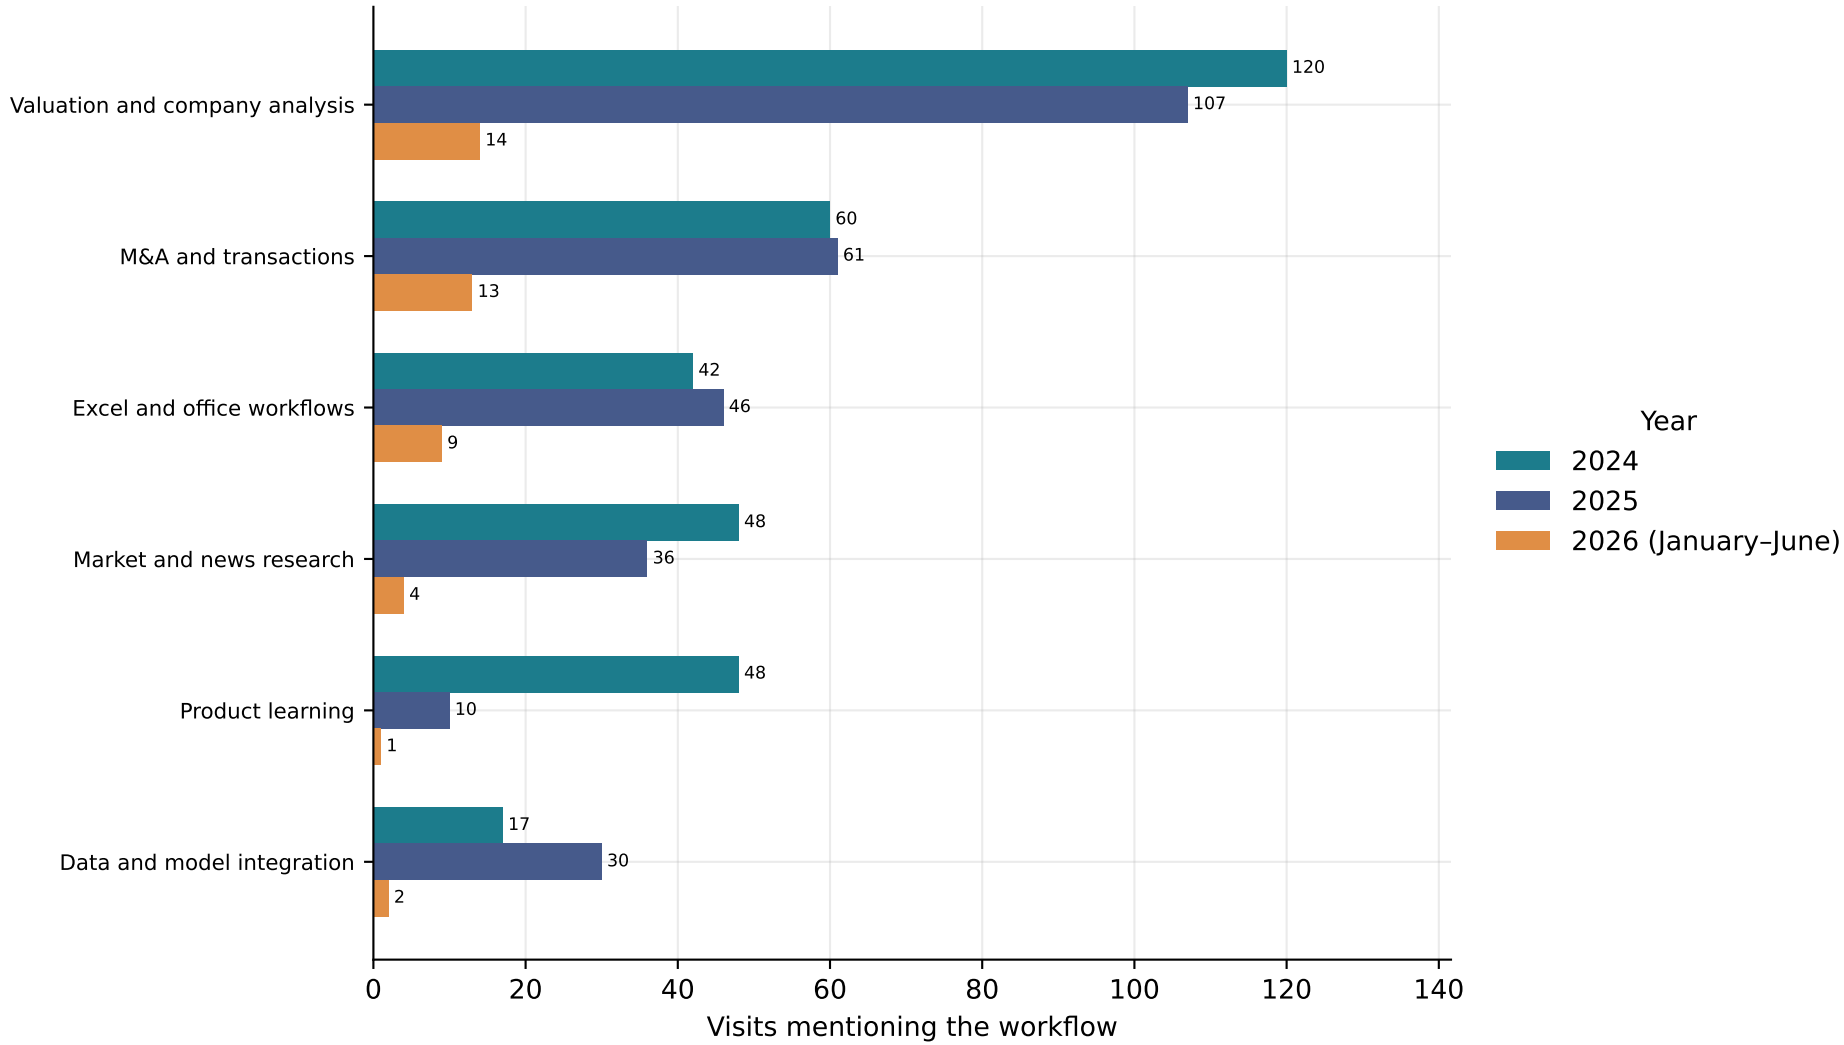

A visit can match several topics, so the bars overlap and are not a split of 100%. The summary CSV lists every topic, including notes that matched none.

Workflows written in the visit notes

Among visits with a classified workflow, the leading theme was 2024: Valuation and company analysis (120); 2025: Valuation and company analysis (107); 2026: Valuation and company analysis (14). Job titles are not used to assign the workflow.

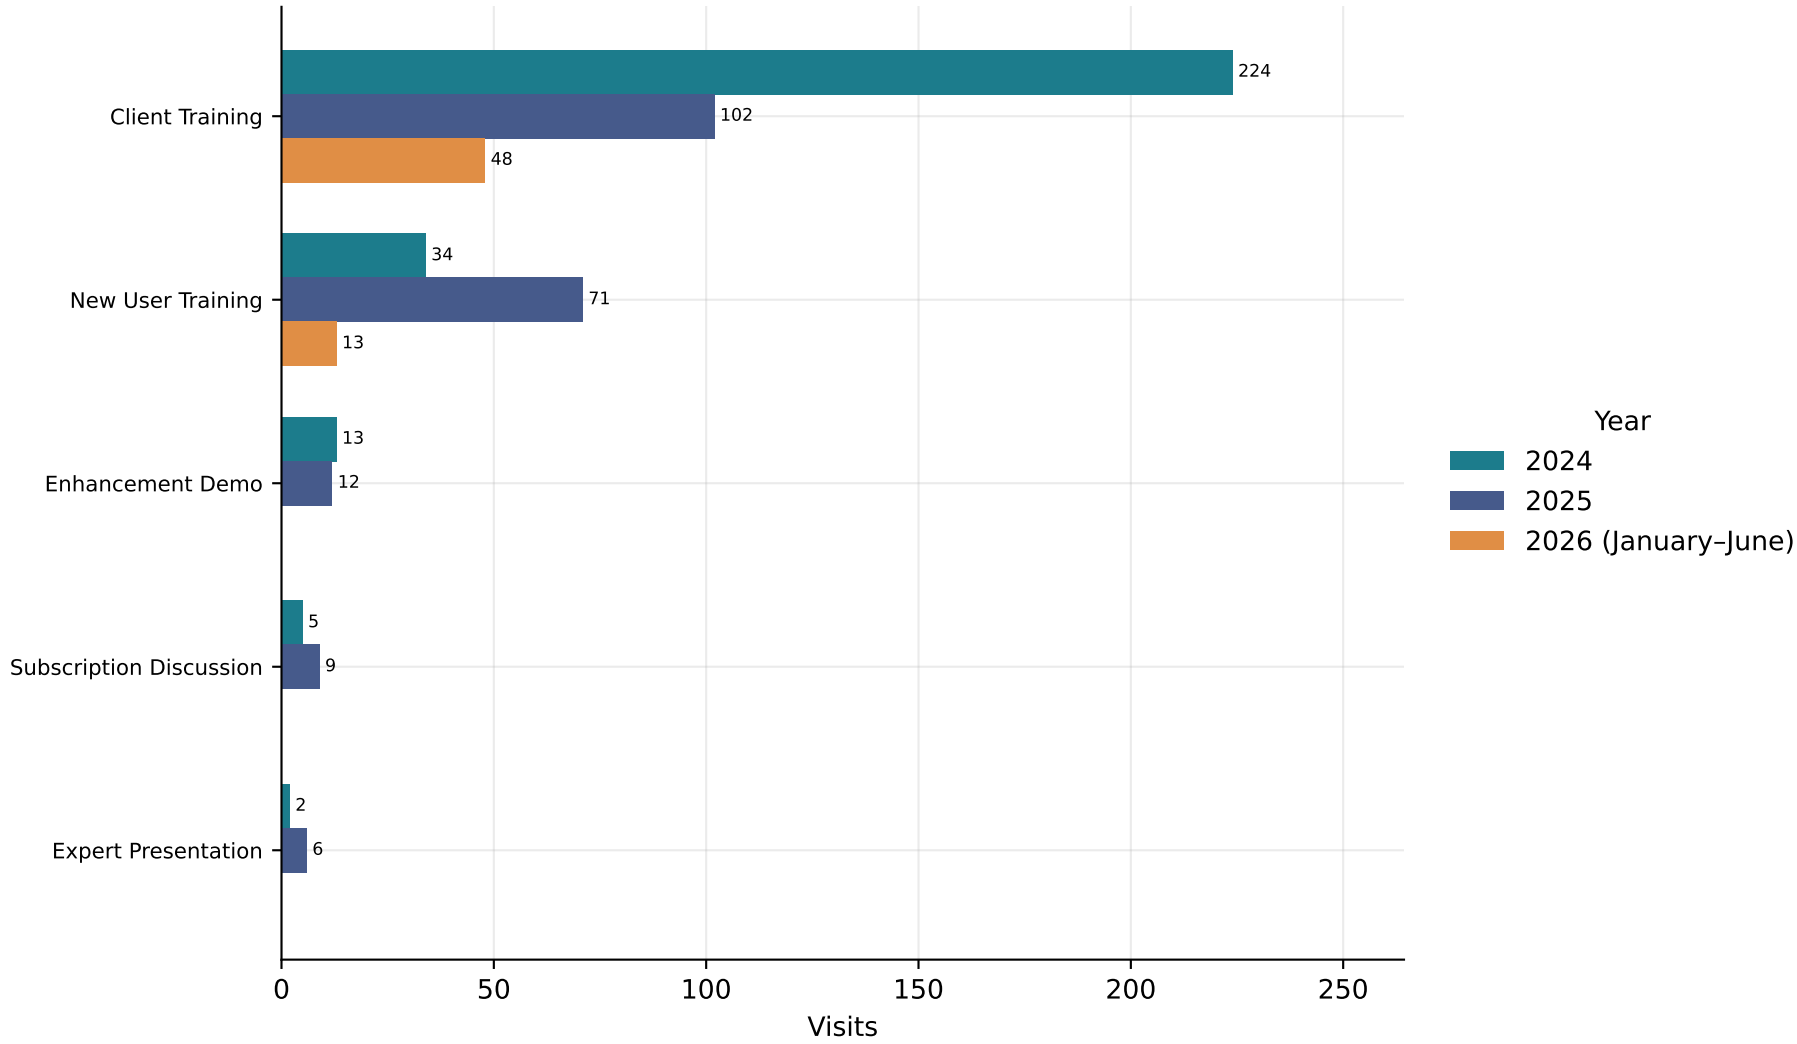

Workflow text is Key Workflows, or Meeting Notes only when Key Workflows is empty. 2024: 184 of 289 visits have a classified workflow, 105 do not; 2025: 143 of 220 visits have a classified workflow, 77 do not; 2026: 29 of 67 visits have a classified workflow, 38 do not. Categories can overlap.

Demonstration type, as selected

The chart uses the original Demonstration Type text, including combined selections. The most frequent selection was 2024: Client Training (224); 2025: Client Training (102); 2026: Client Training (48).

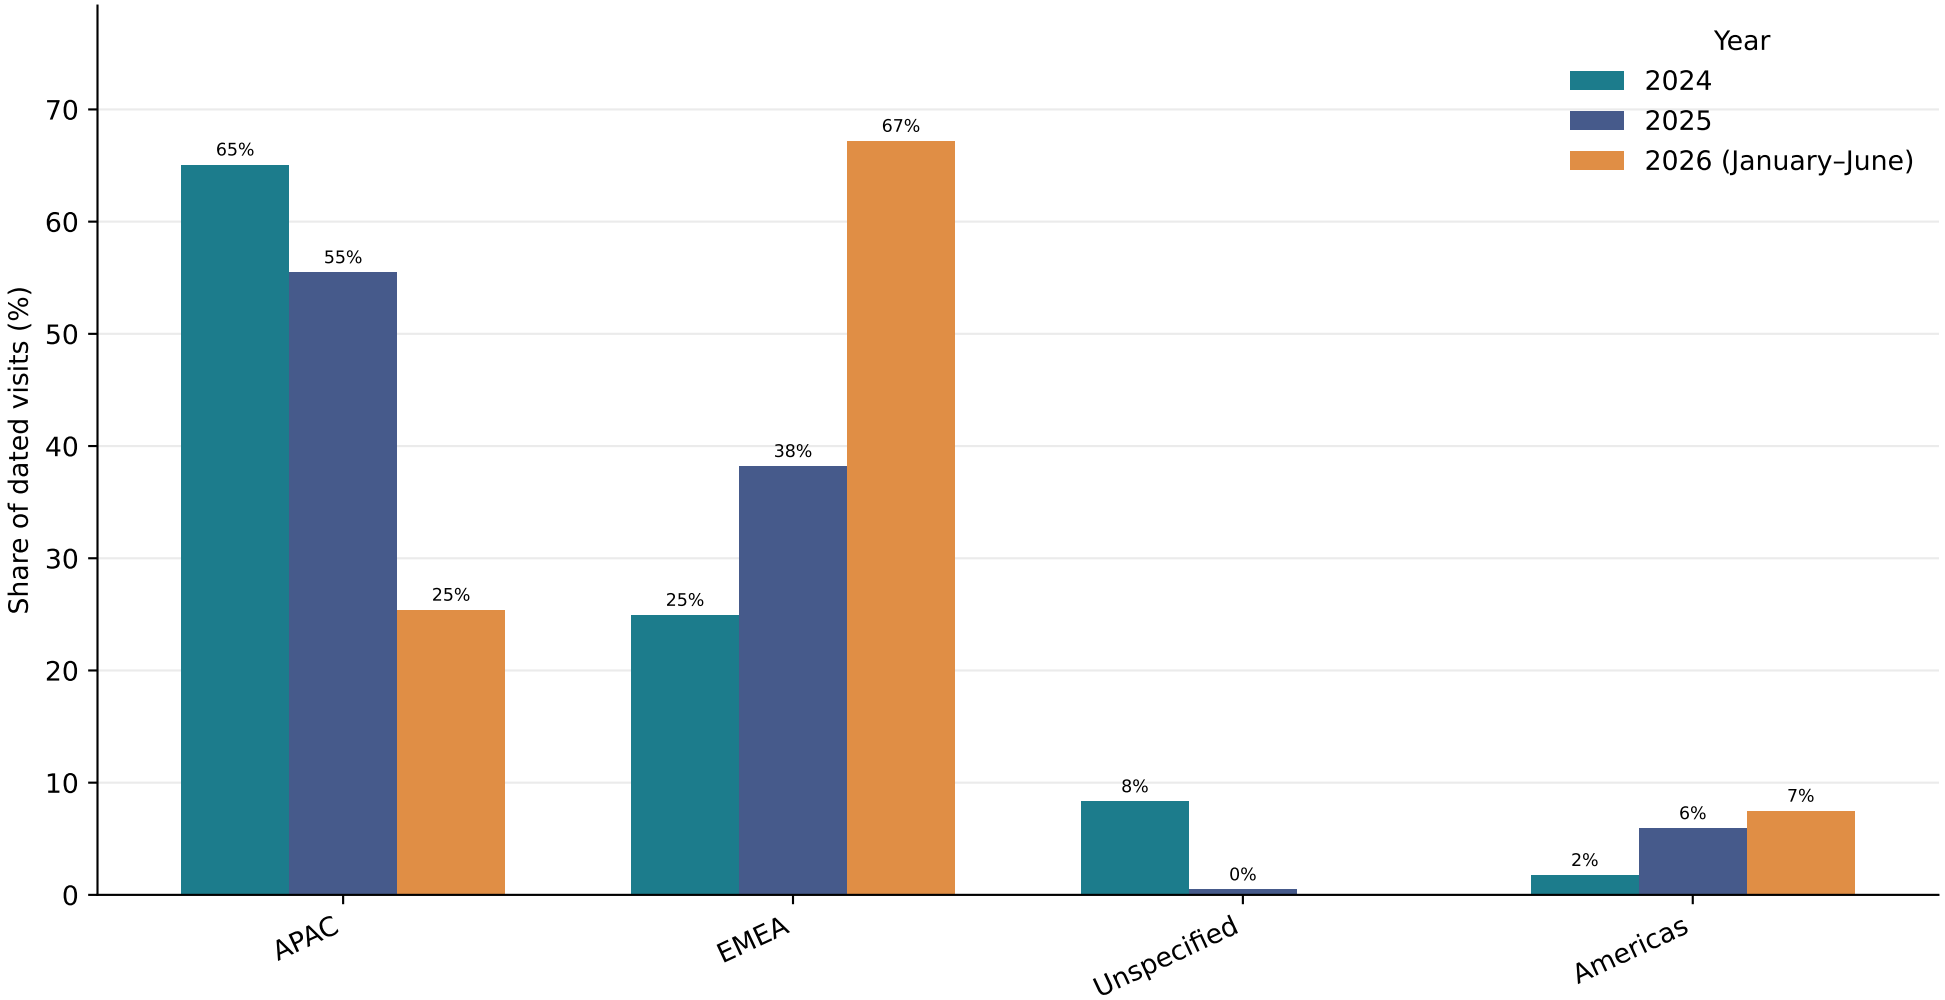

'Client Training' accounts for 78% of 2024, 46% of 2025, 72% of 2026. Combined selections such as 'Client Training; New User Training' stay as their own value. The summary lists every selection; the chart shows the five most frequent.

Where the logged visits were based

The leading region was 2024: APAC (188) of 289 (65%); 2025: APAC (122) of 220 (55%); 2026: EMEA (45) of 67 (67%). Blank countries are Unspecified and are not assigned to a region.

Percentages use each year's dated visits as the denominator. 2024: APAC 65%, EMEA 25%, Unspecified 8%, Americas 2%. 2025: APAC 55%, EMEA 38%, Americas 6%, Unspecified 0%. 2026 (January–June): EMEA 67%, APAC 25%, Americas 7%. This is where logged visits were recorded, not regional market size.

What these records can and cannot support

Scope

These files contain 576 dated visits (289 in 2024, 220 in 2025, 67 in 2026 (January–June)). A row is one logged visit, not one unique client. The export has no prospect list, invitation count, or booking outcome.

Limit

The report can describe when visits were logged and which topics, workflows, and session types were written down. It cannot say how many demos were missed, why a year is higher or lower, or which outreach would increase bookings. Those questions need pipeline and attendance data in addition to visit reports.

Method

Solution topics come only from Solutions Discussed. Workflows come from Key Workflows, or from Meeting Notes when Key Workflows is blank. Roles come from Team/User Job Description. Demonstration type is the source value; demonstration category is a regex grouping of that value. Challenges come from Workflow Challenges and Consequences of living without Solution.

Interpretation

A visit counts once per matched topic, workflow, or challenge, and may appear in more than one. Rules are regular expressions, so a new phrasing stays in the summary as uncategorized until a rule is added. Counts are not revenue, satisfaction, or evidence that a session caused adoption.
