Visits by Product

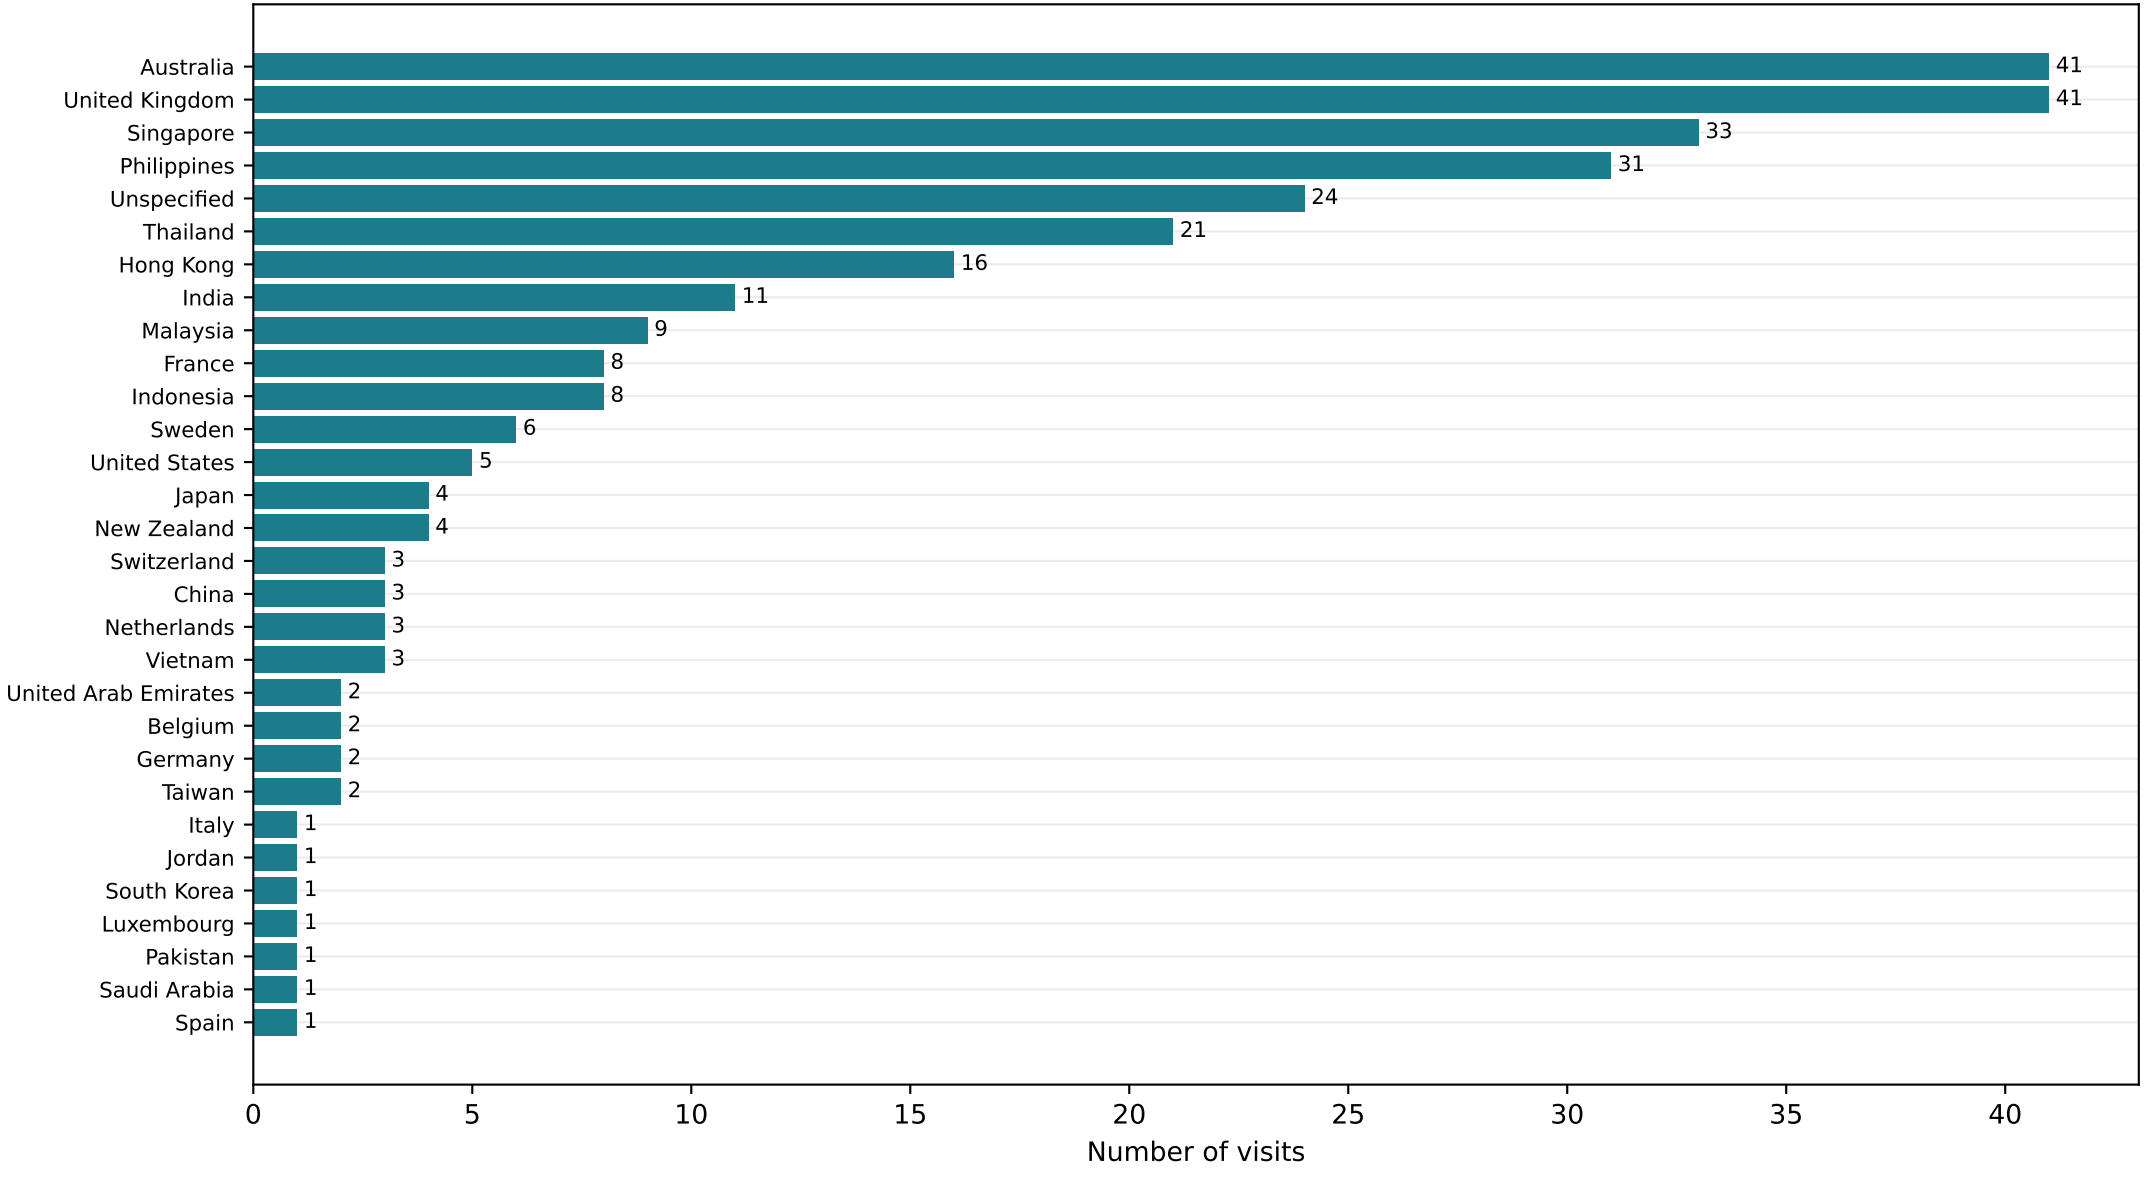

Ranks products discussed during visits; multi-product visits contribute once to each product named.

Source: Cleaned Manila visit dataset | Regex-based categorization

Visits by Client Country

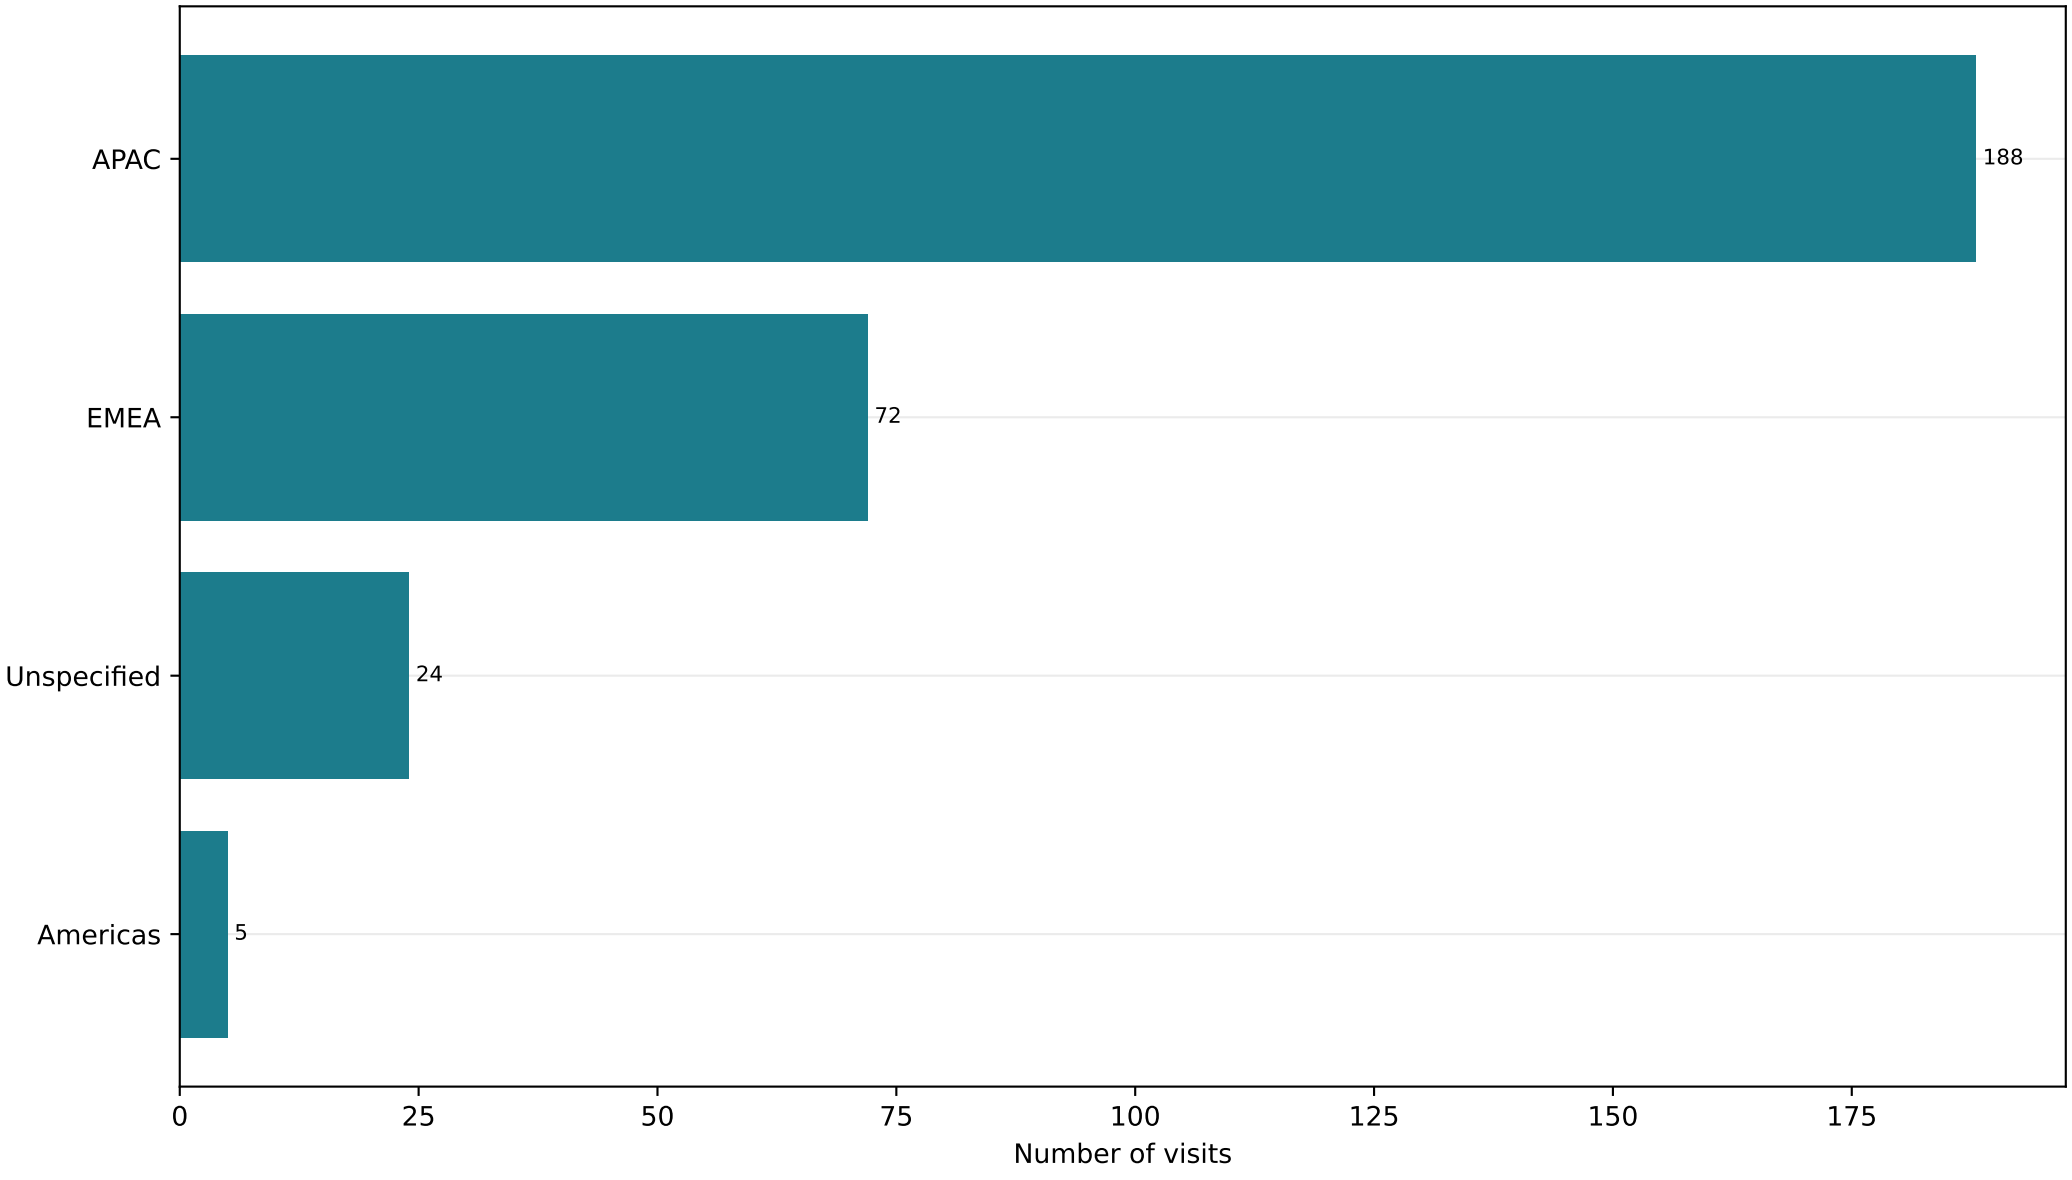

Shows where demo demand is concentrated, providing a practical geographic view of the client base.

Source: Cleaned Manila visit dataset | Regex-based categorization

Visits by Client Region

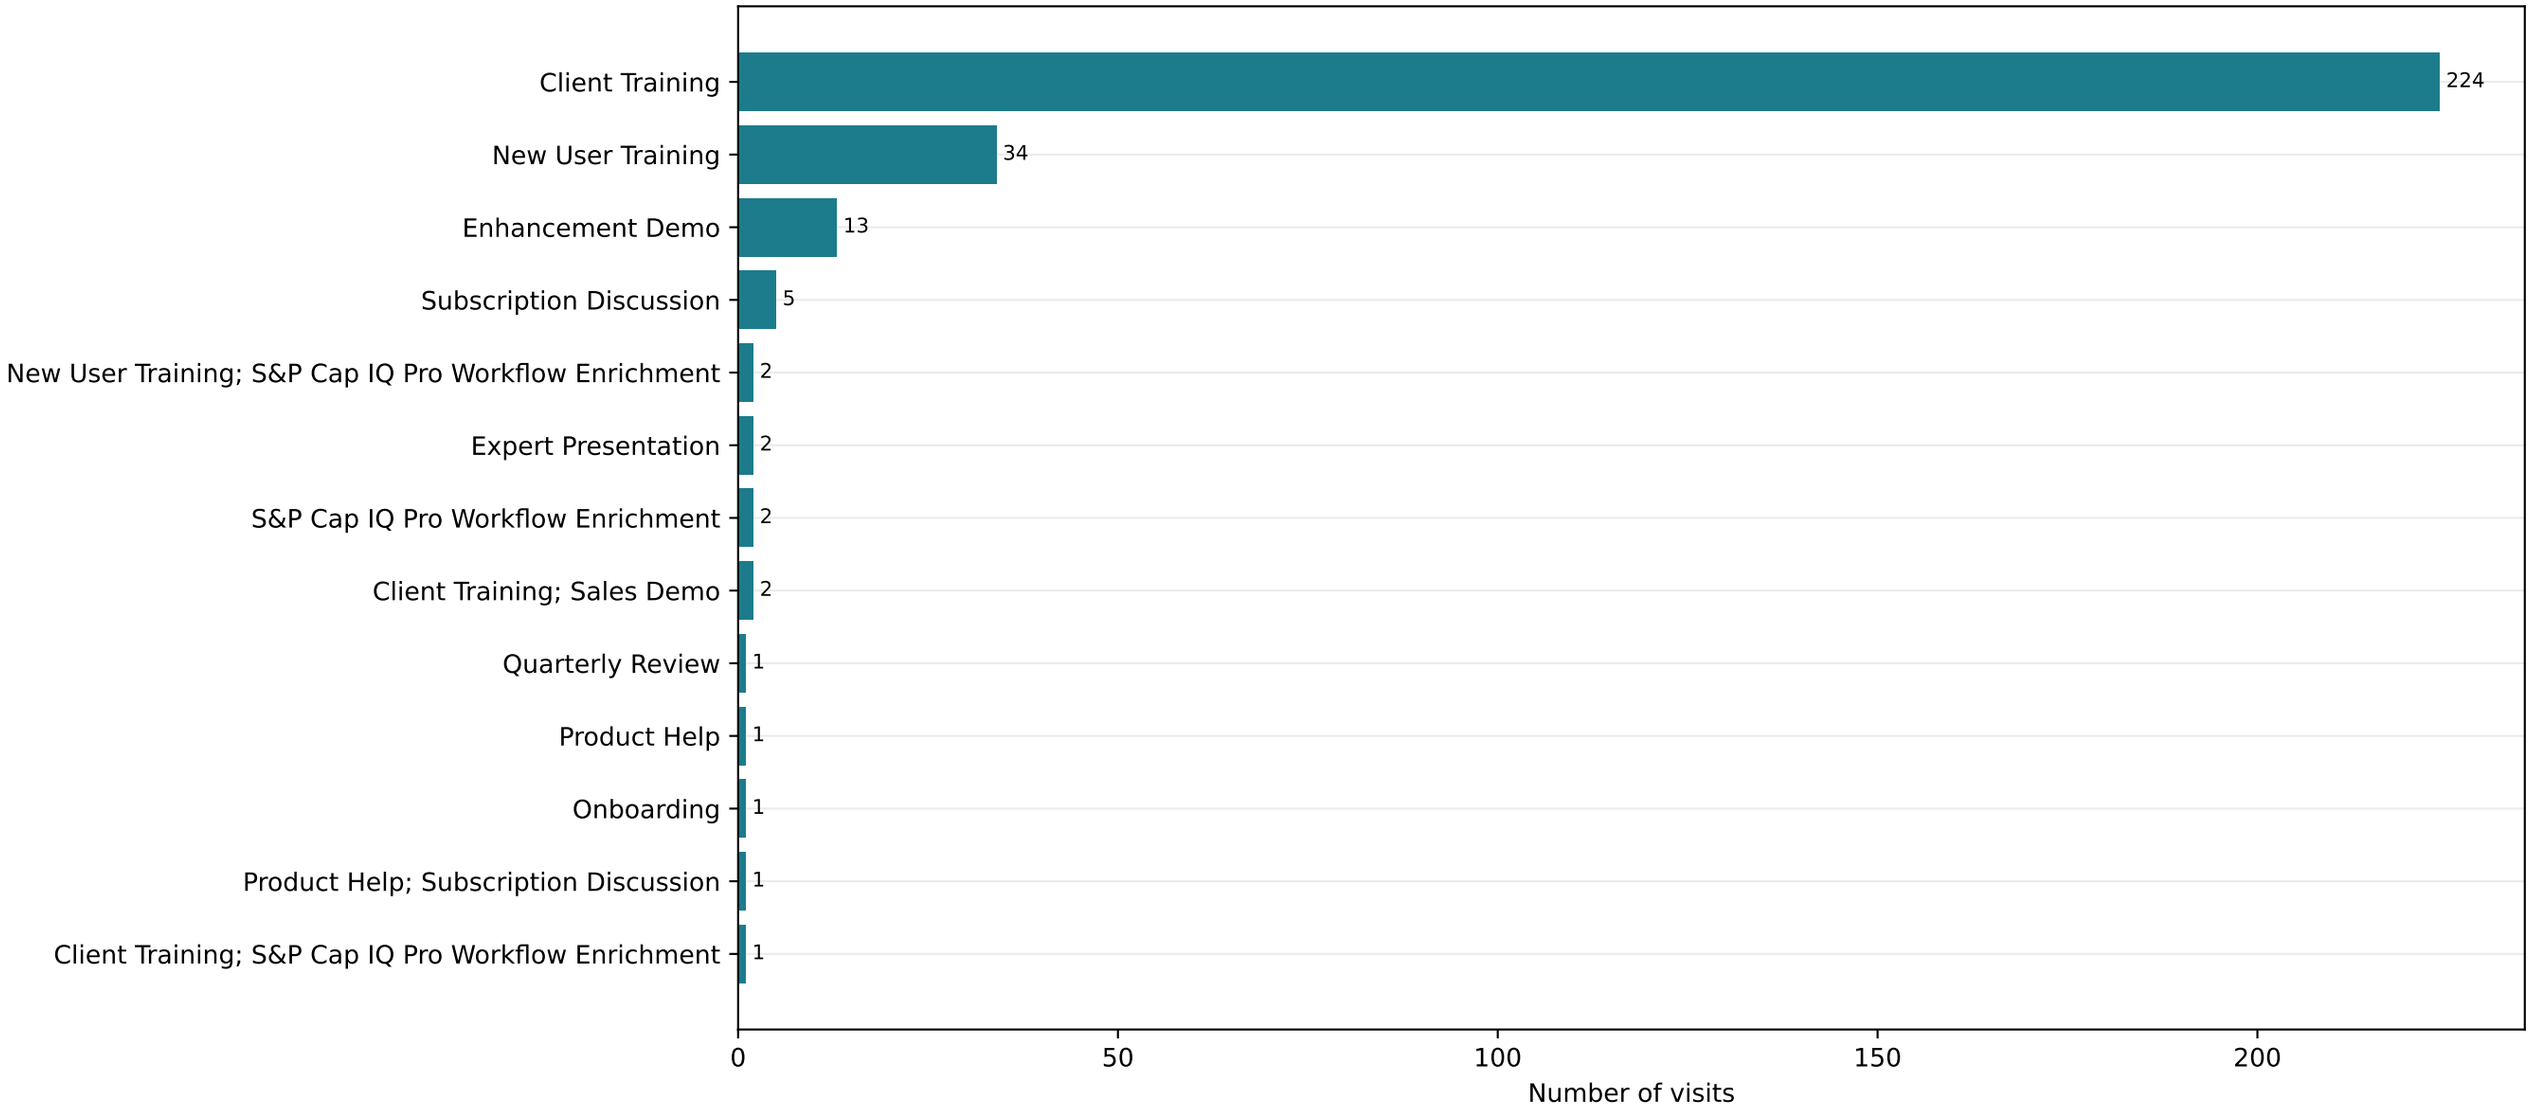

Groups client countries into APAC, EMEA, and Americas to show regional demand alongside the country-level view.

Client Profile: Job Description

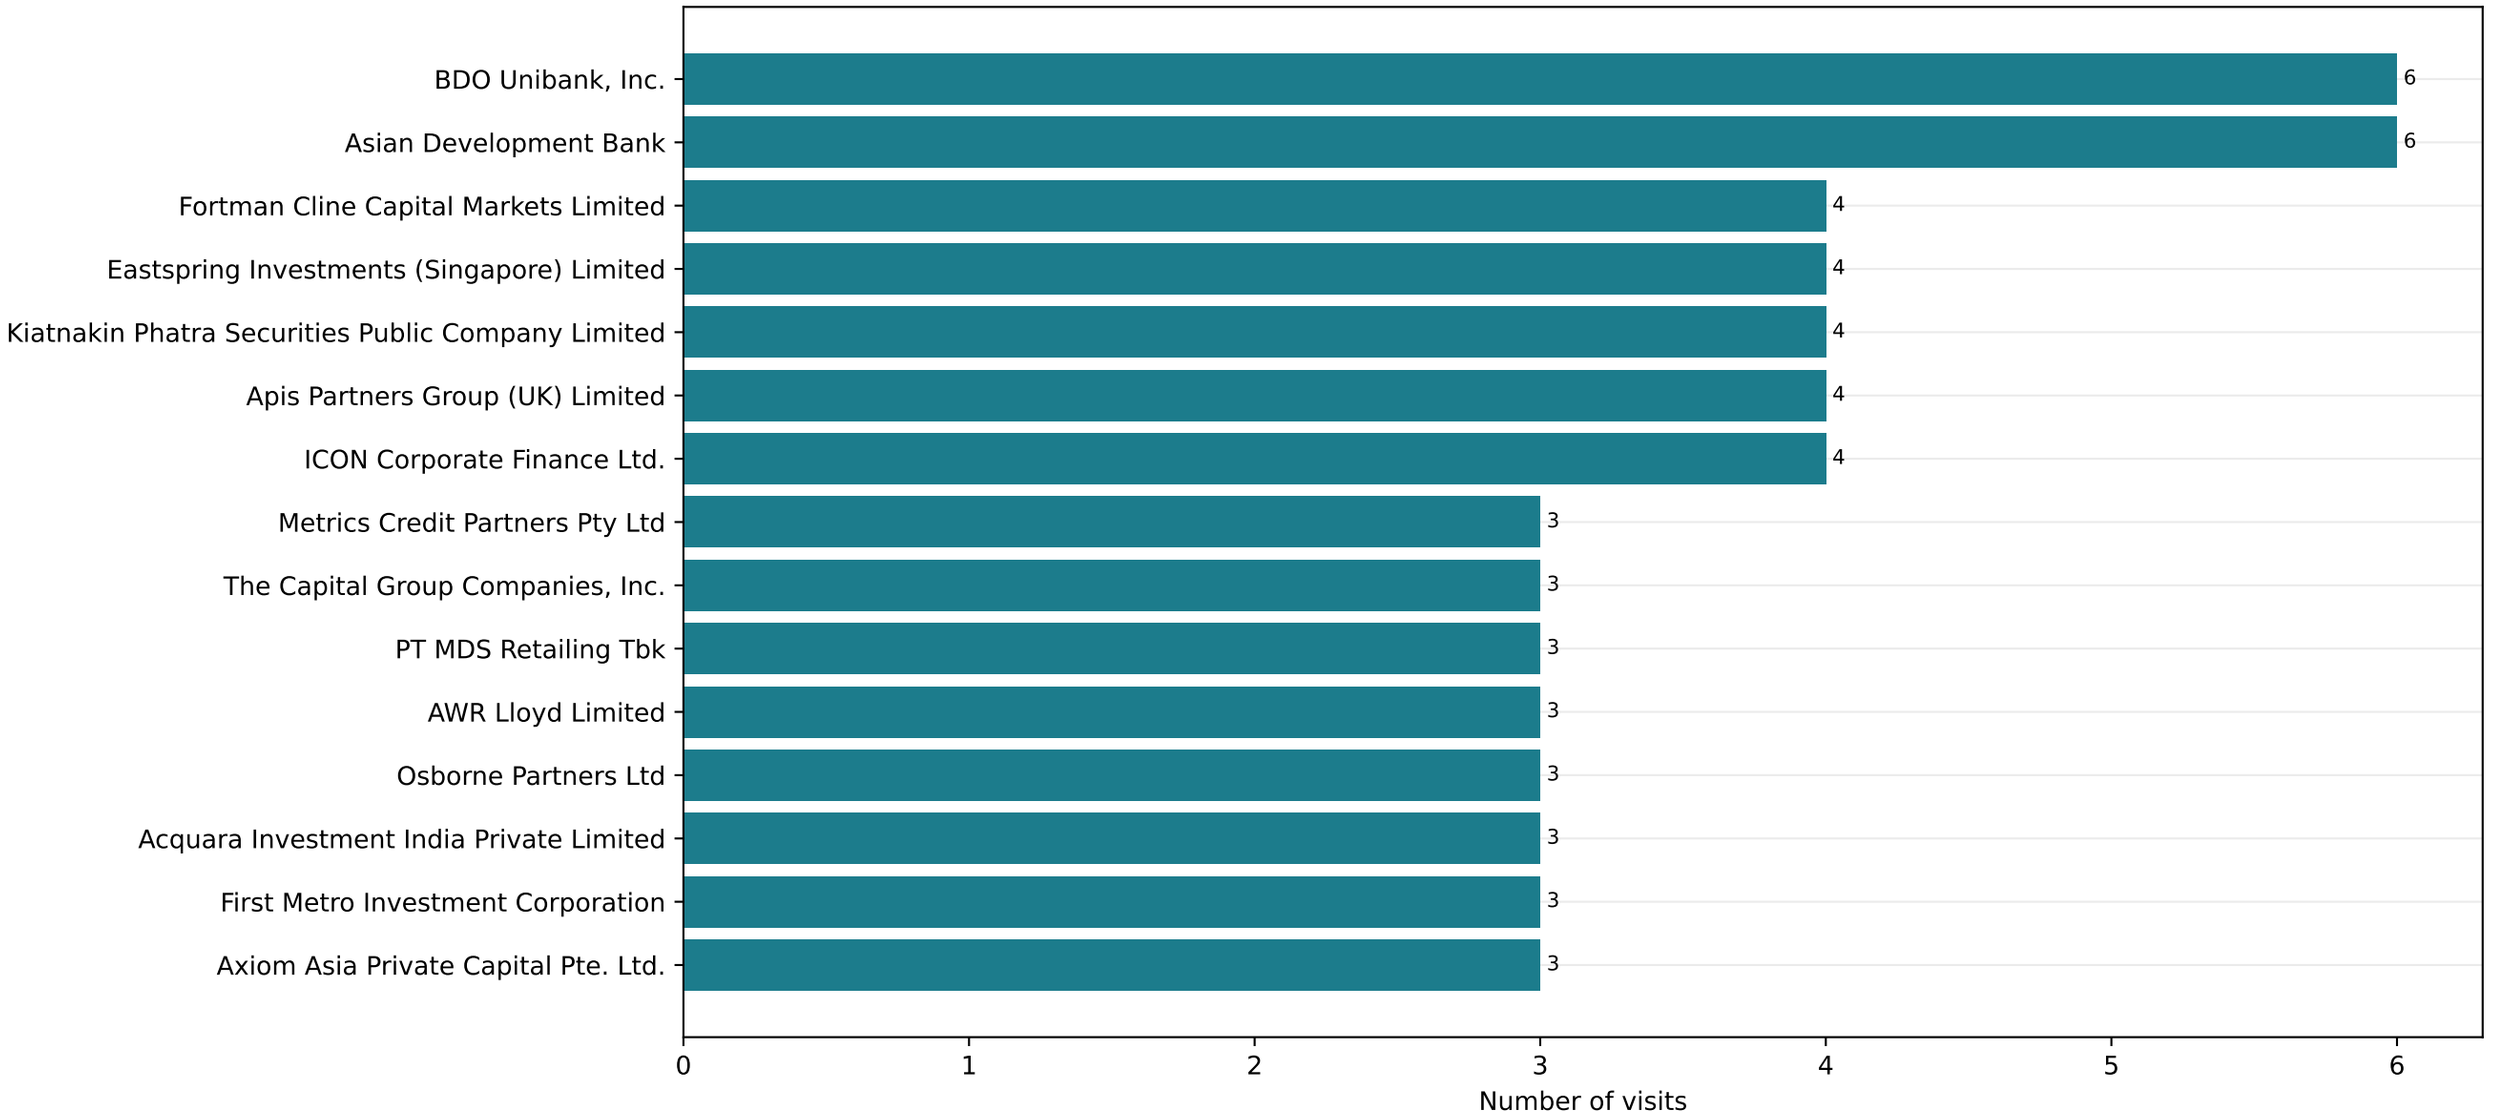

Groups free-text job descriptions into transparent regex-based role families to identify the audiences receiving demos.

Source: Cleaned Manila visit dataset | Regex-based categorization

Client Profile: Account Concentration

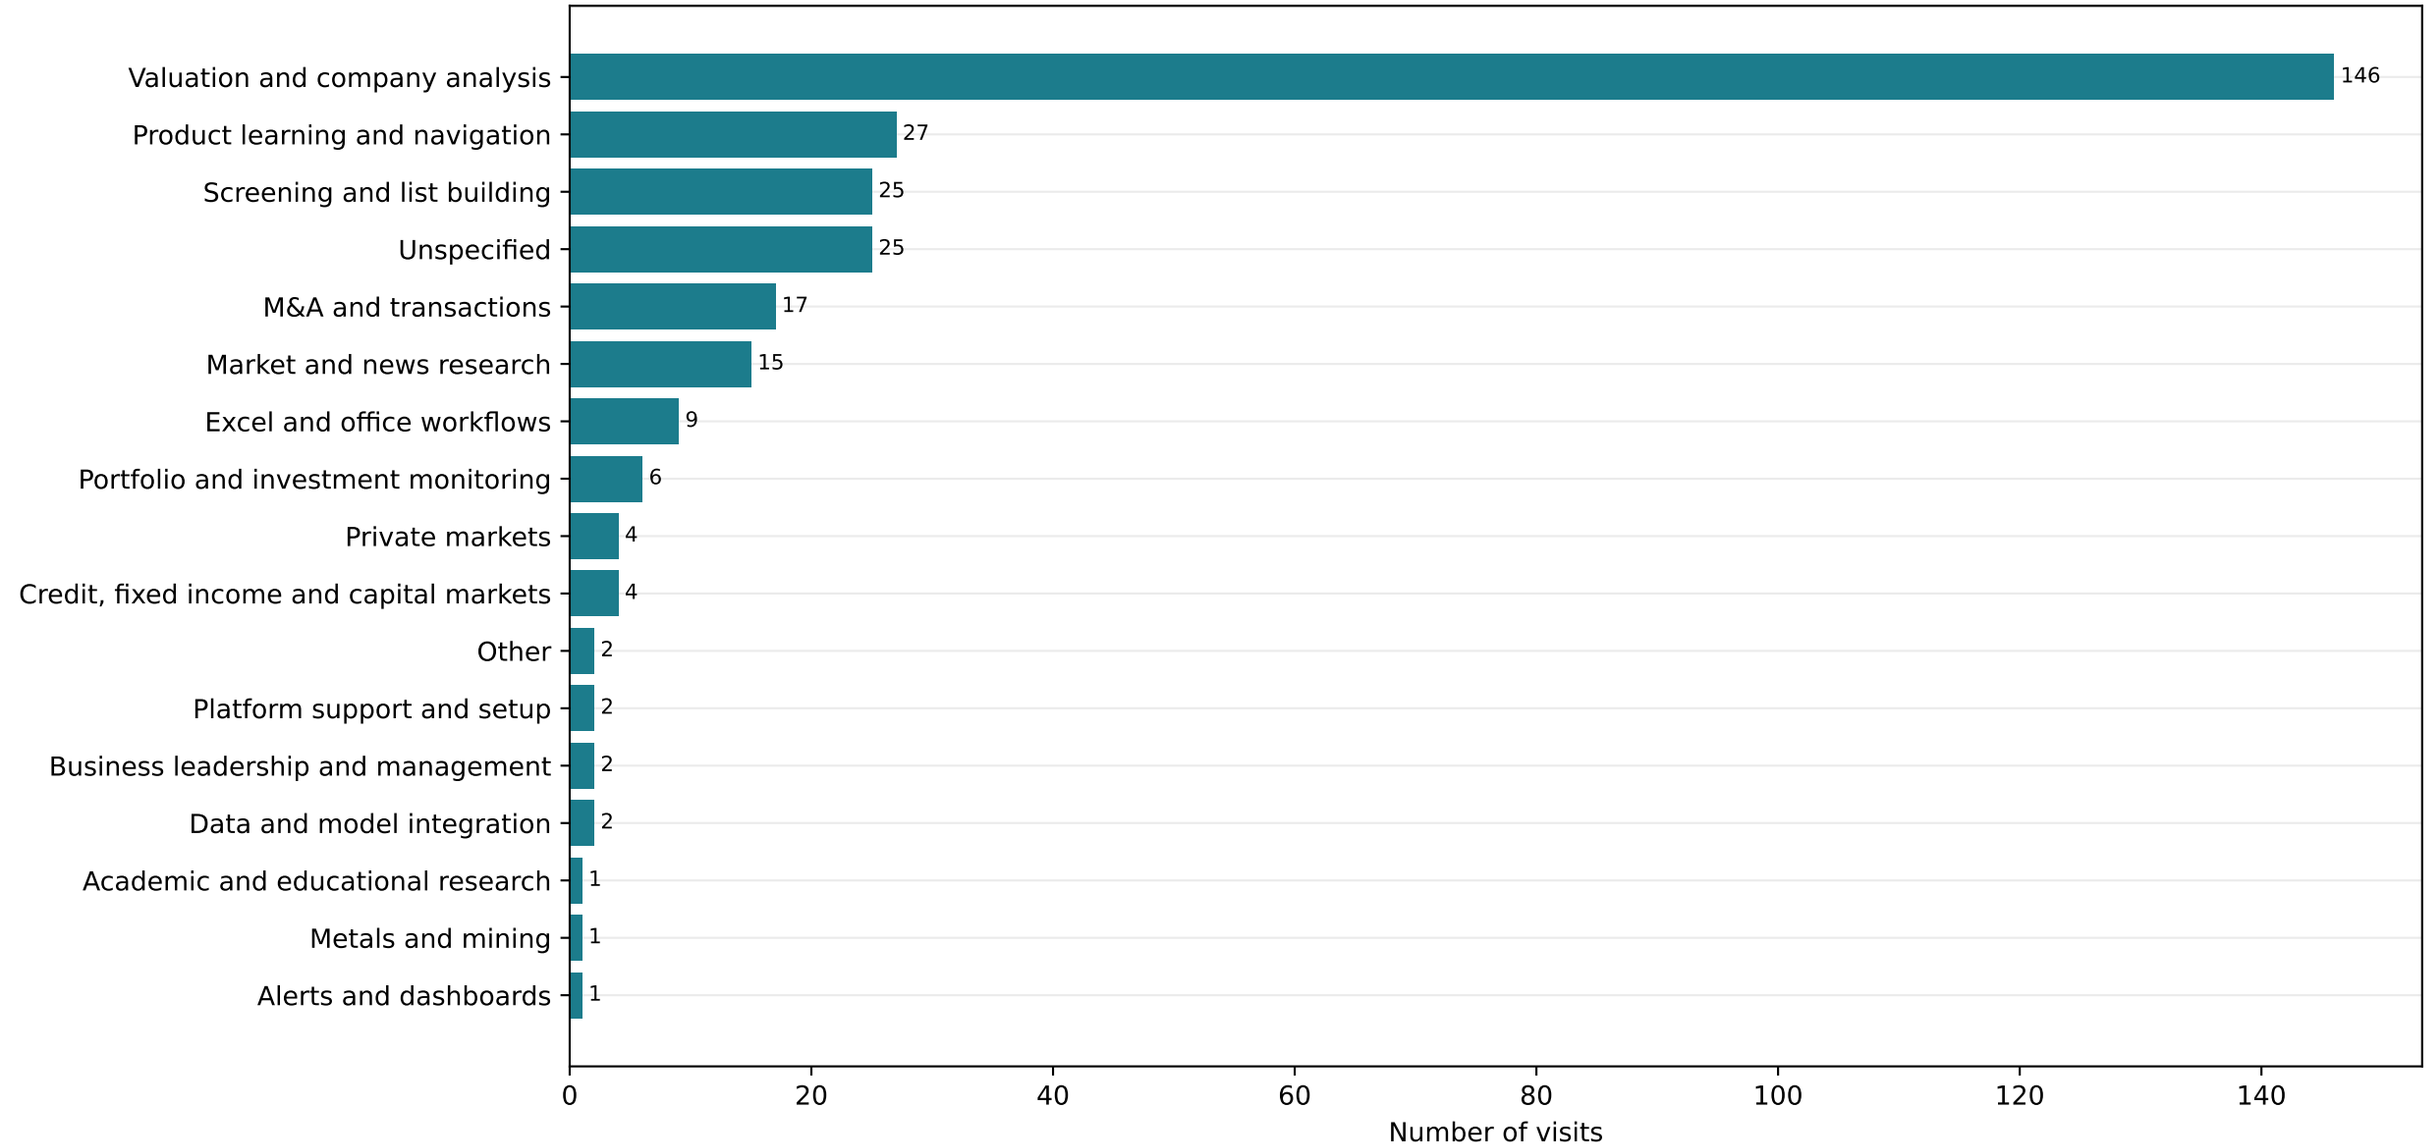

Highlights the accounts with the most recorded visits; this helps separate repeat engagement from broad market reach.

Source: Cleaned Manila visit dataset | Regex-based categorization

Client Profile: Key Workflows

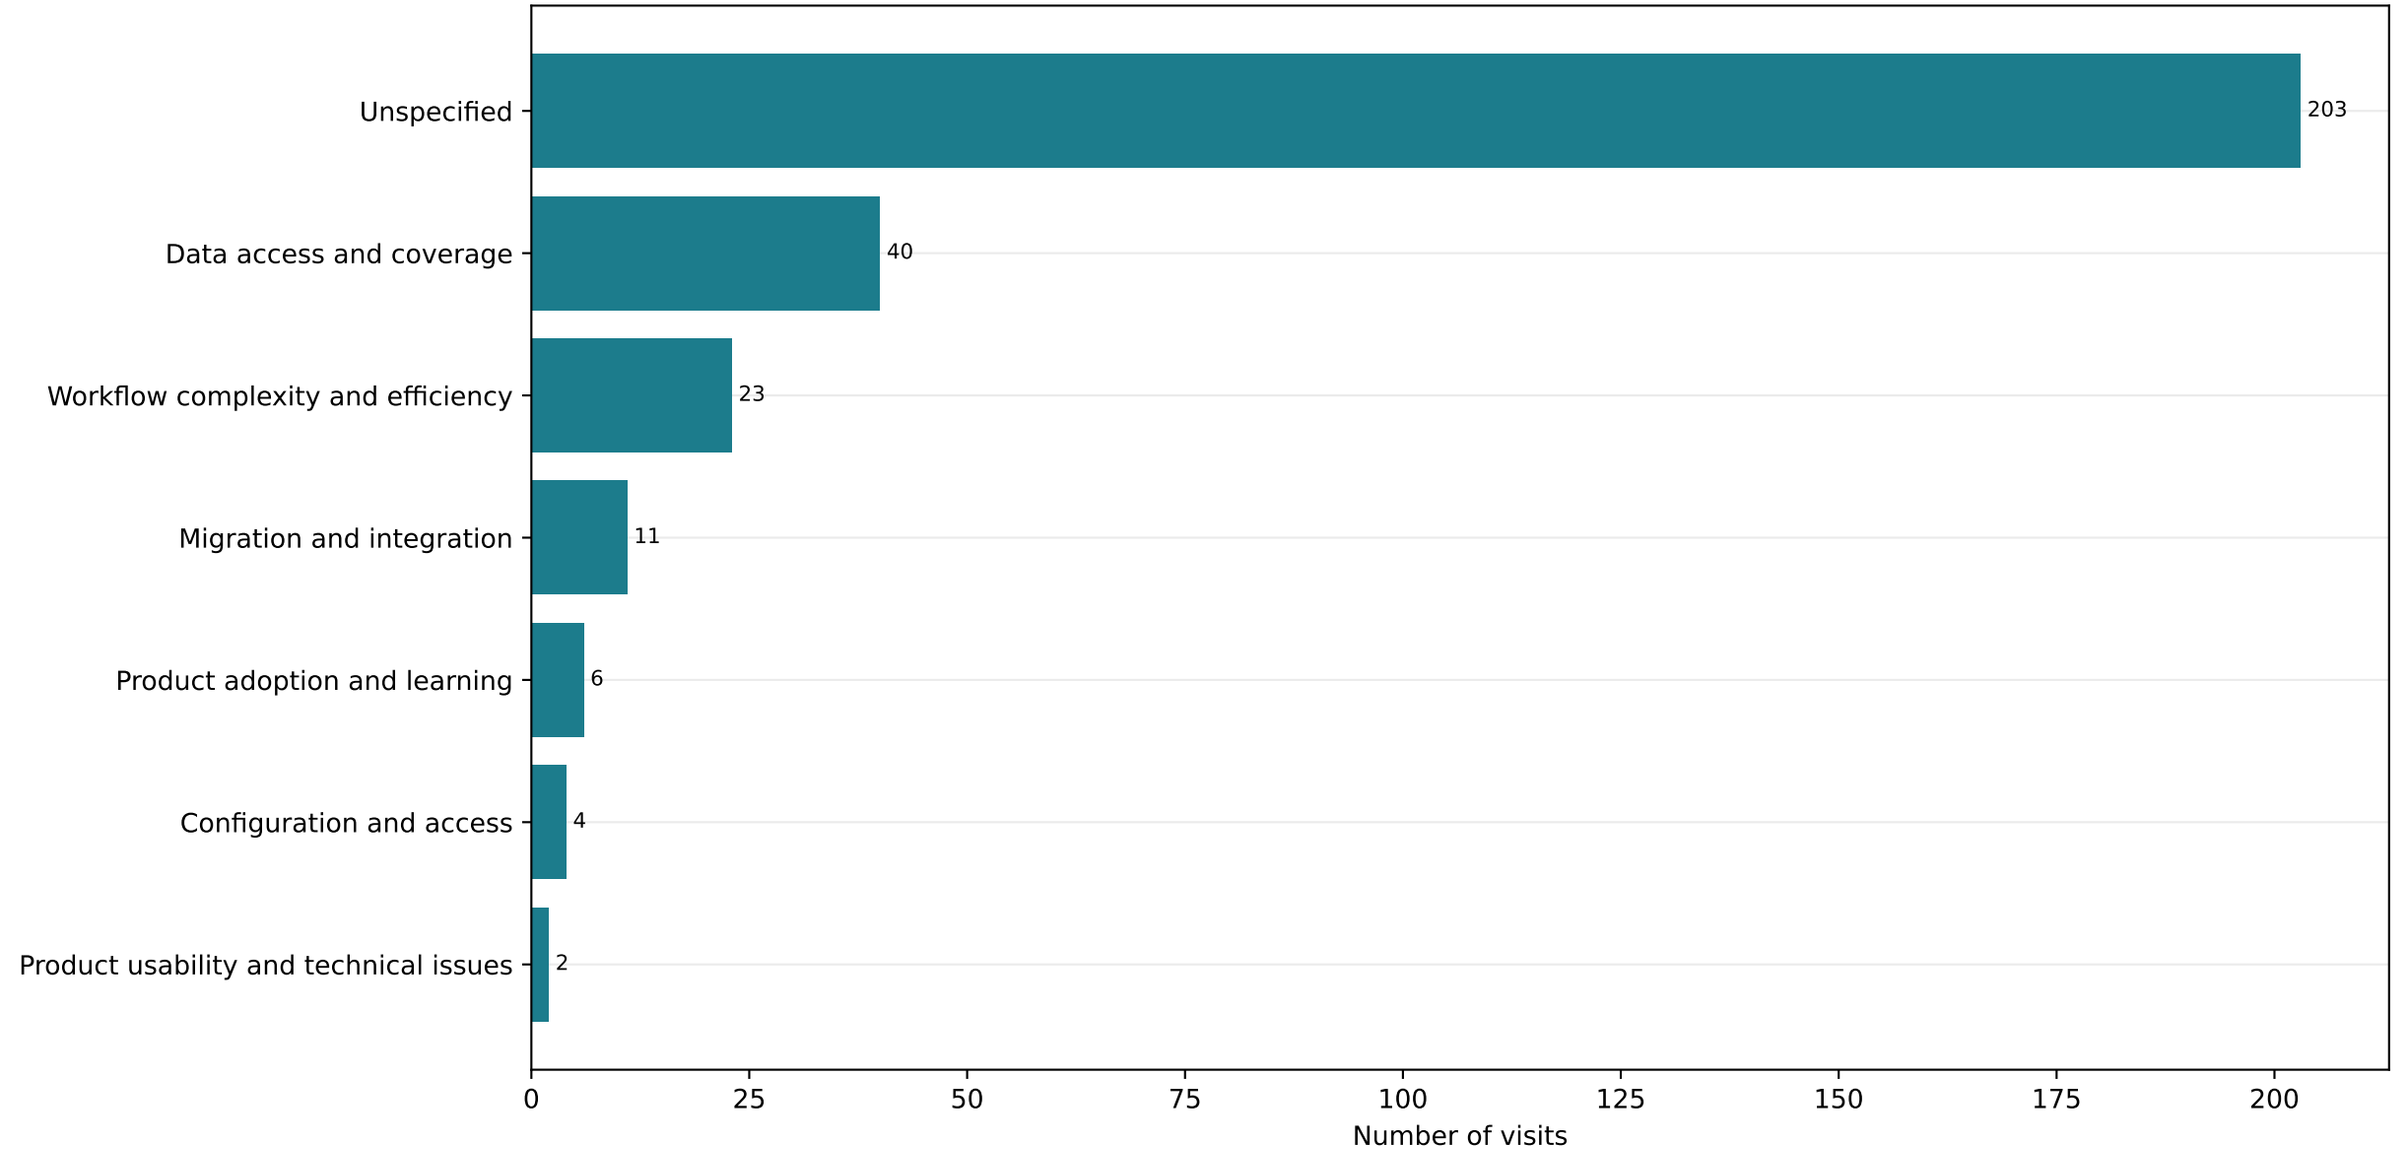

Categorizes the stated workflows so Manila can align future demos with the tasks clients most often need to complete.

Source: Cleaned Manila visit dataset | Regex-based categorization

Client Profile: Workflow Challenges

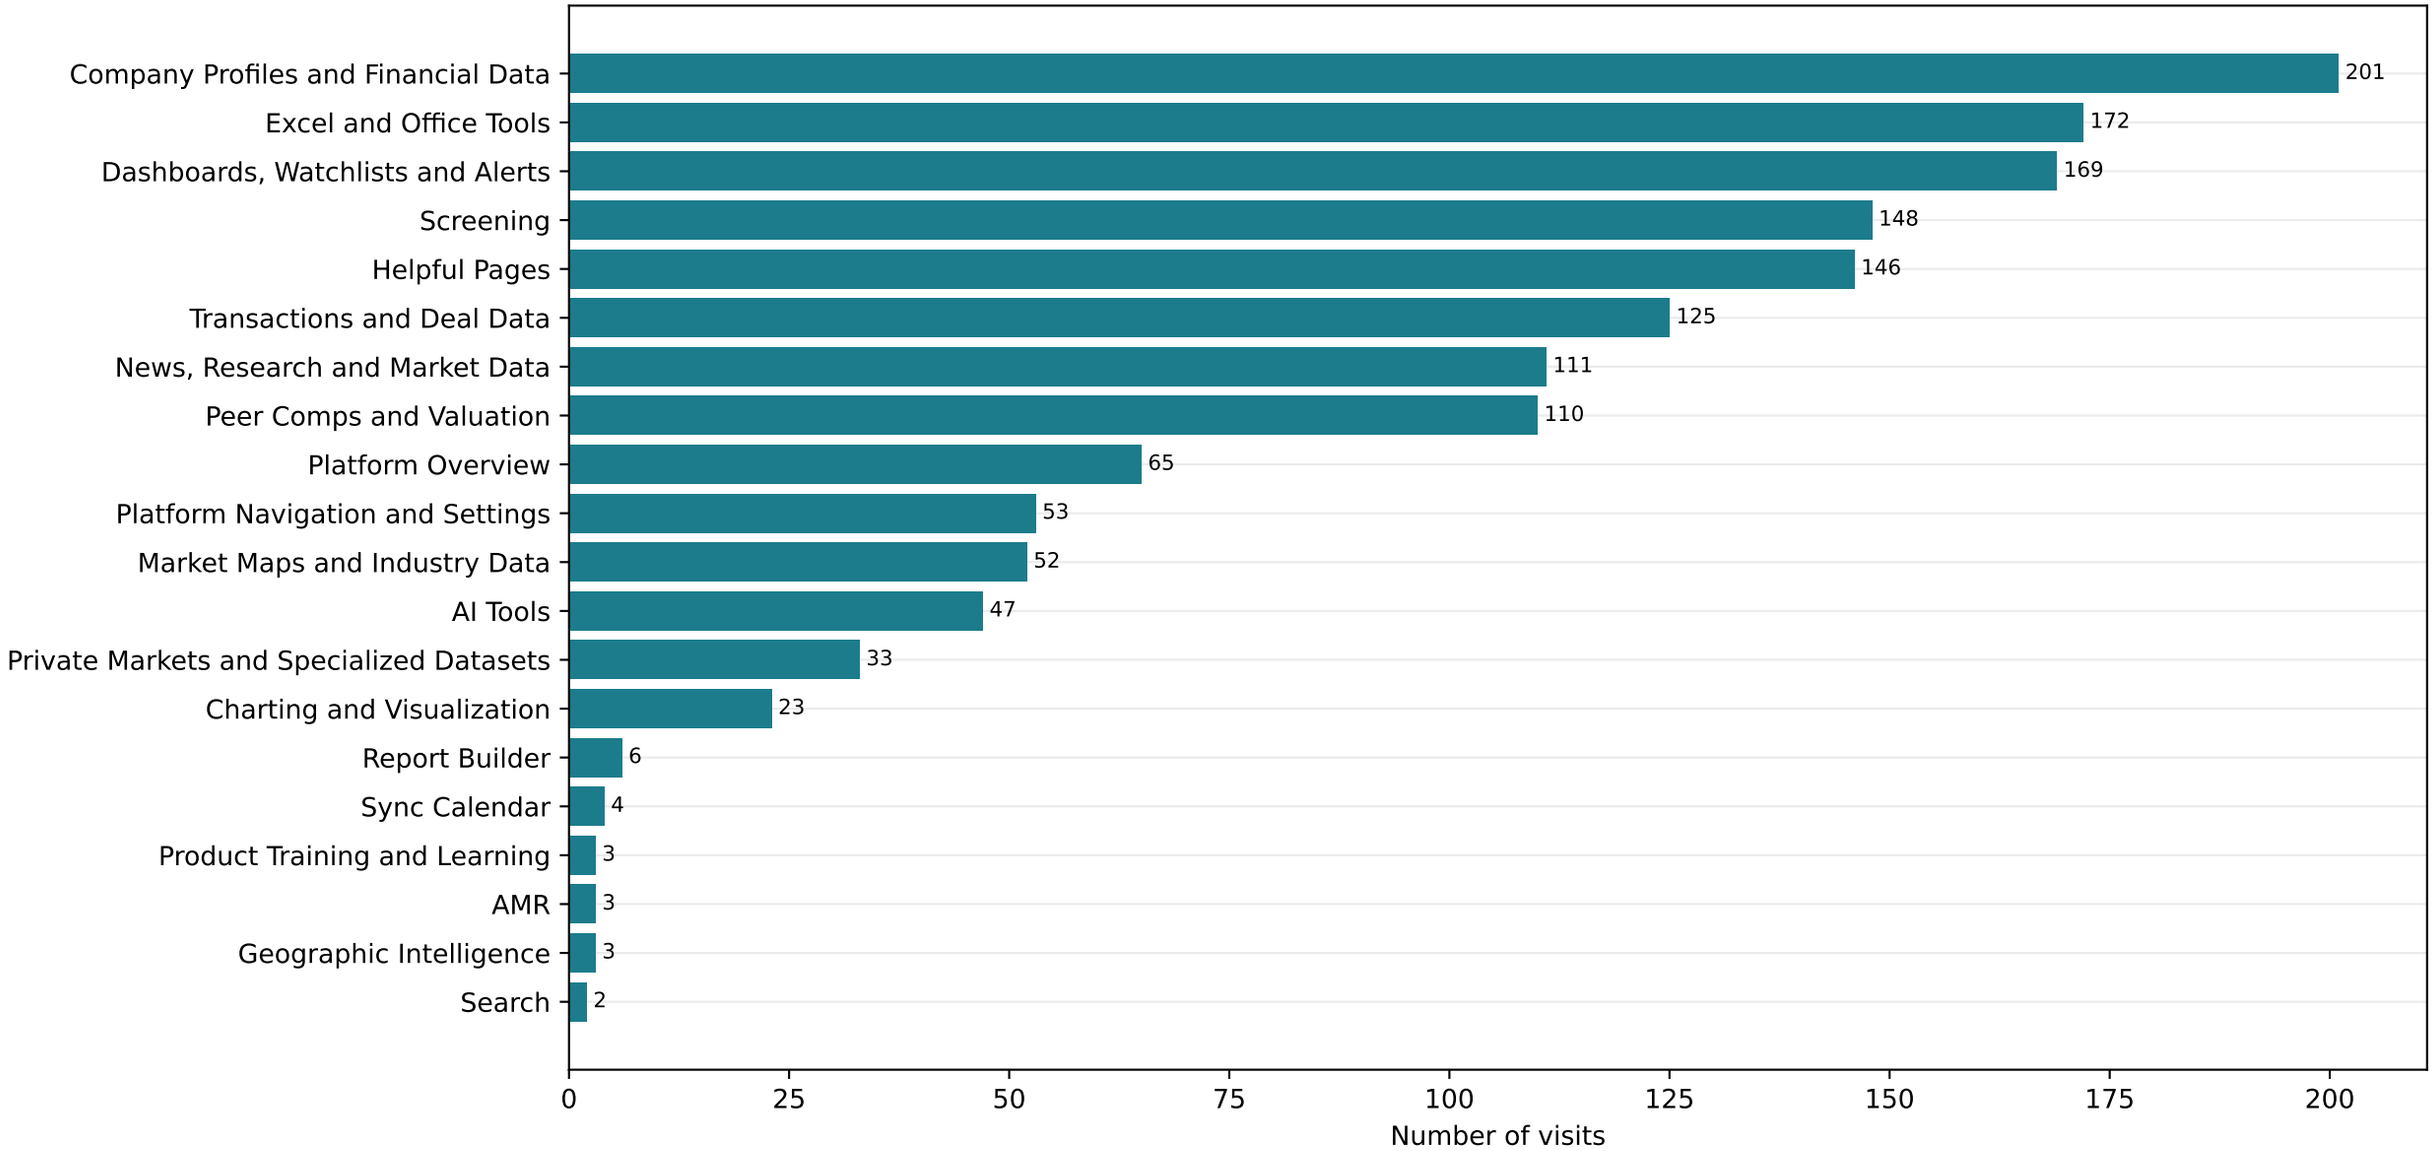

Groups challenge and consequence narratives to identify recurring adoption barriers that future visits can address.
