RECORDED VISITS

67

FH12026 (Jan–Jun)

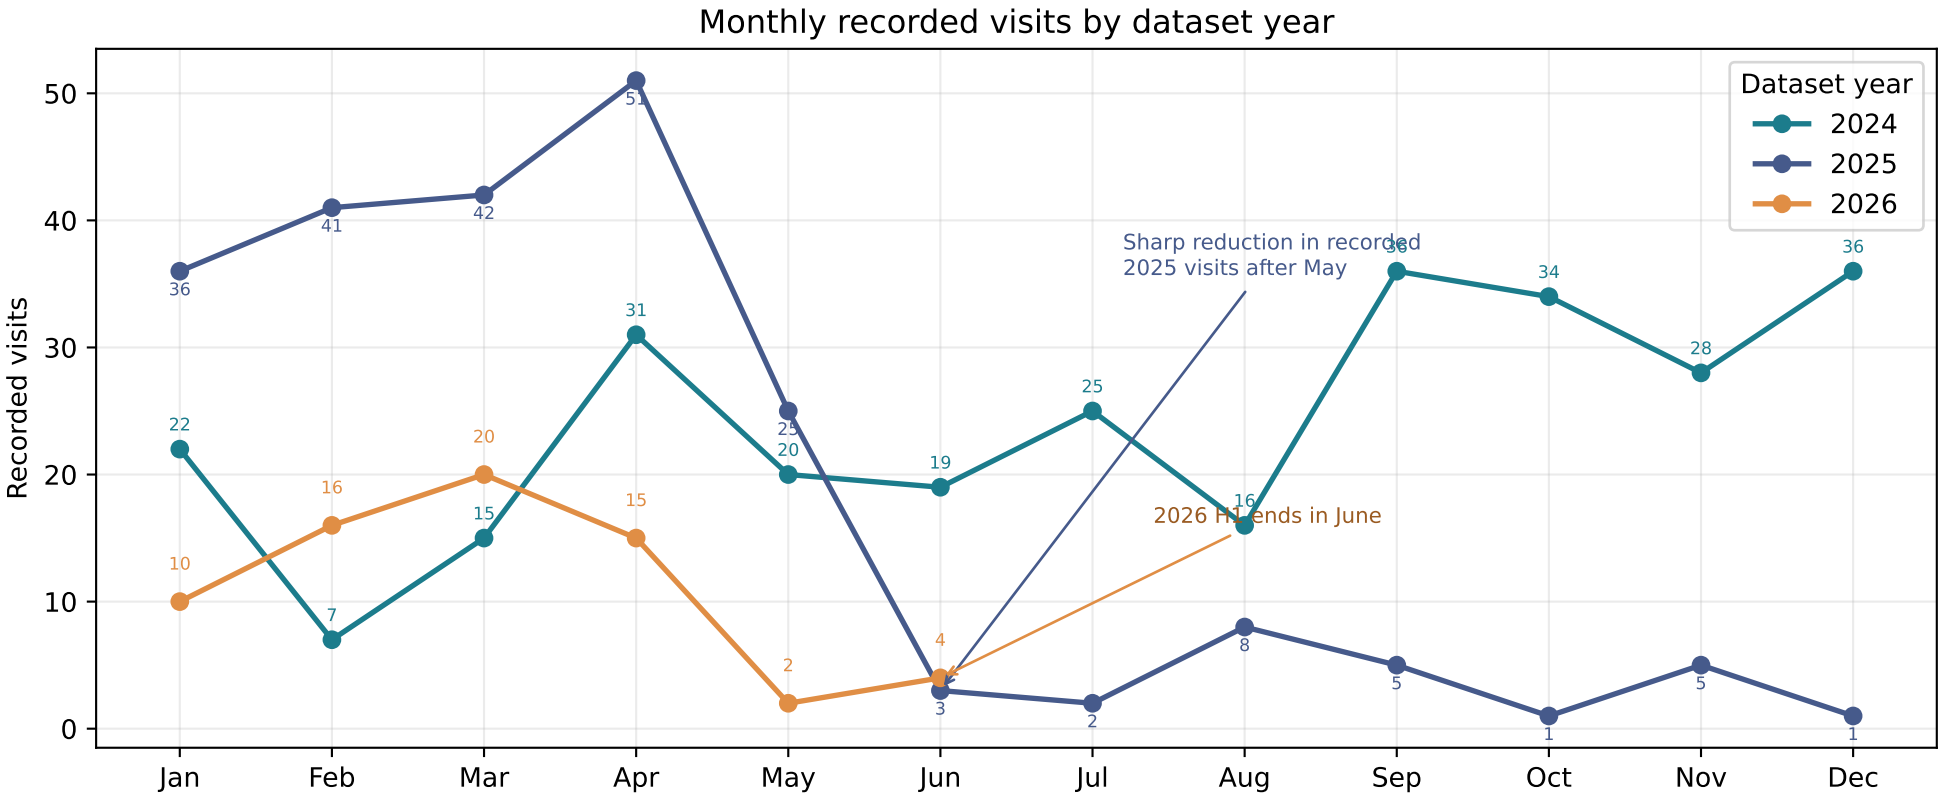

Client Training is the most frequent exact Demonstration Type selection (224 in 2024; 102 in 2025; 48 in 2026 H1).

Interpret recorded activity with caution: later-period volumes and partial-year coverage limit direct demand comparisons.

Source: FY2024, FY2025, and FH12026 Visit Reports.

1. Read the activity curve before reading the demand story

The dataset contains 289 visits in 2024, 220 in 2025, and 67 in 2026 H1. However, 198 of the 2025 records (90%) fall in January–June, and 67 of 2026 H1 records (100%) fall in January–June by definition. There are only 22 records in July–December 2025 and 6 in May–June 2026.

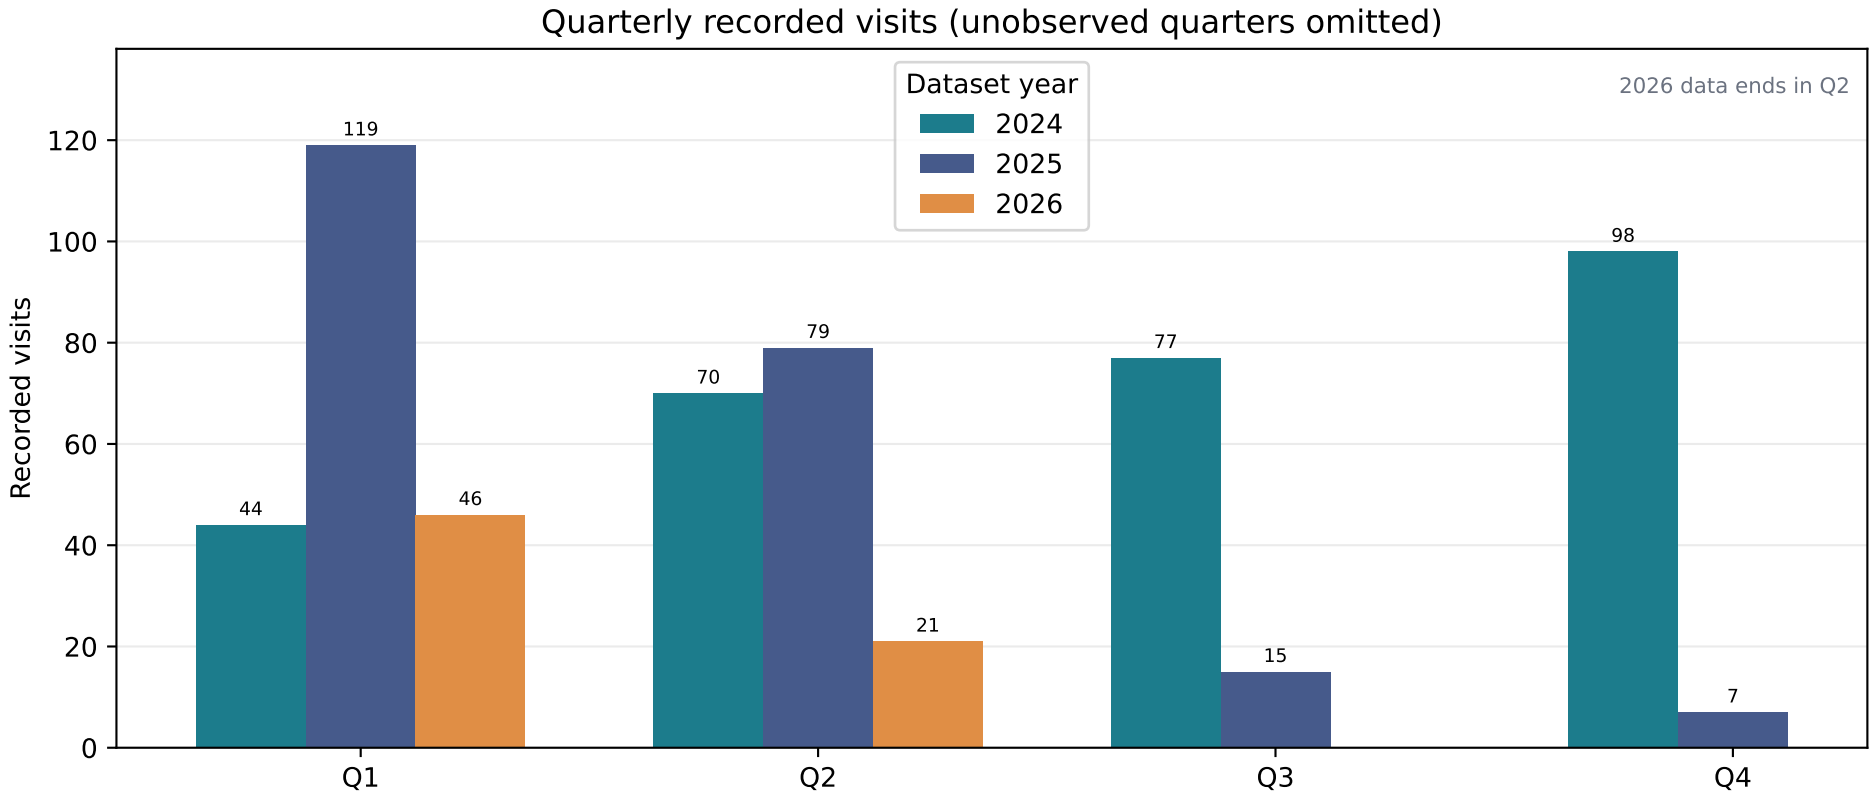

WHAT THIS MEANS

The 2025 file is strongly front-loaded: 198 of 220 records (90%) are from January–June, compared with 114 of 289 in the same 2024 period (39%); it leaves 22 in July–December. In 2026, 0 records fall in May–June. The 2025 H1 count is 84 higher than 2024 H1, even though the 2025 full-year count is lower by 24%. This reversal shows why full-year totals alone can mislead when activity is concentrated in different reporting periods.

Source: FY2024, FY2025, and FH12026 Visit Reports.

2. Quarterly cadence shows both opportunity and a coverage gap

Recorded visits by quarter were 2024: Q1 44, Q2 70, Q3 77, Q4 98; 2025: Q1 119, Q2 79, Q3 15, Q4 7; and 2026 H1: Q1 46, Q2 21. The sharp 2025 second-half drop and the unavailable 2026 second half limit demand comparisons.

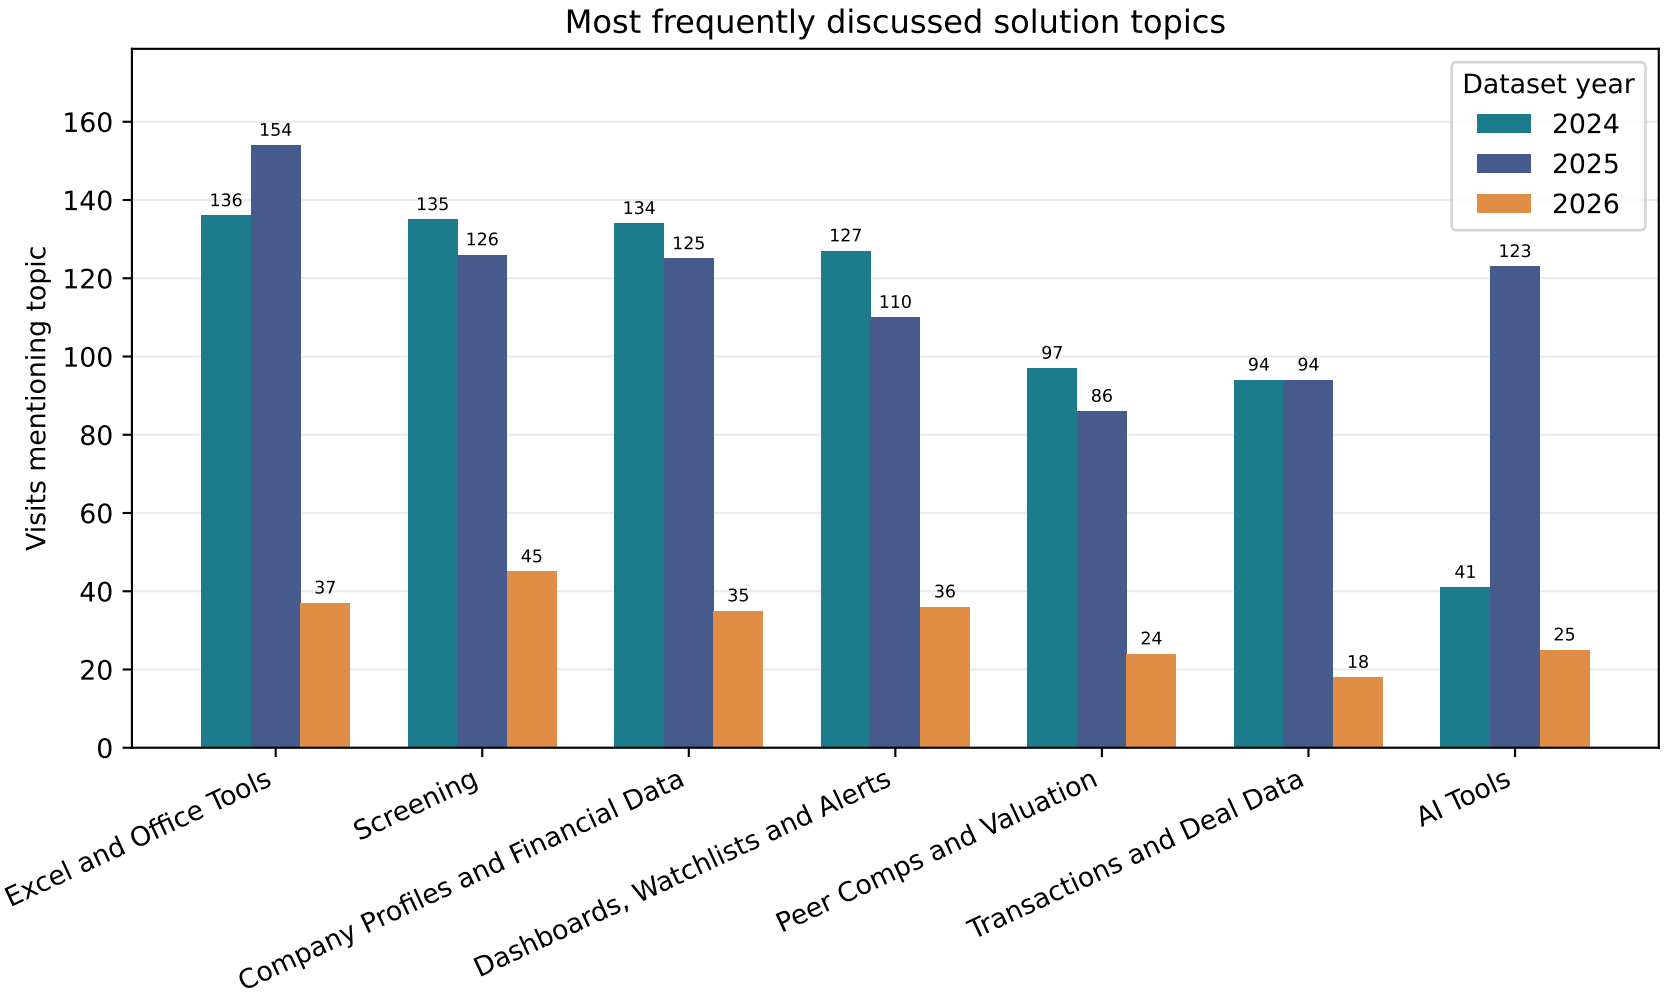

WHAT THIS MEANS

2024 peaks in Q4 (98 visits). In 2025, Q1 and Q2 account for 198 of 220 records, while Q3 and Q4 total 22. The 2026 comparison covers Q1–Q2 only (67 visits). 2025 Q1 alone (119) exceeds its Q3–Q4 combined count (22) by 97. This is a material shift in the timing of logged sessions, not evidence by itself of a matching change in underlying client interest.

Source: FY2024, FY2025, and FH12026 Visit Reports.

3. Practical tool use is the common thread

The most-mentioned solution topic was Excel and Office Tools in 2024 (136 visits) and Excel and Office Tools in 2025 (154). In 2026 H1, Screening leads (45), followed by Excel and Office Tools (37), Dashboards, Watchlists and Alerts (36).

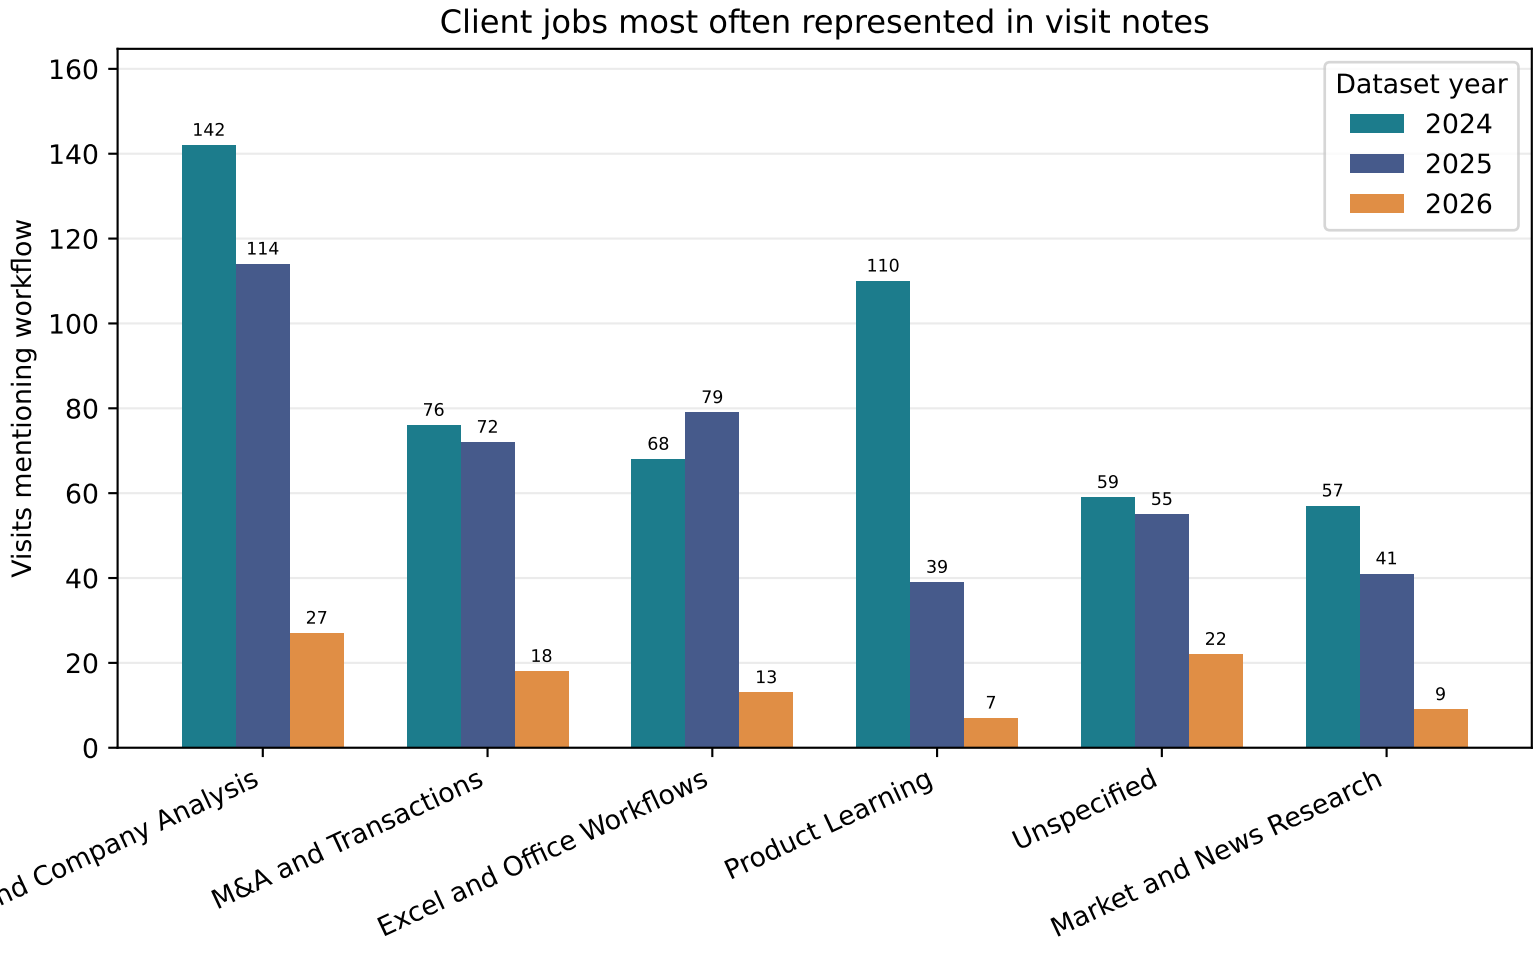

WHAT THIS MEANS

Excel and Office Tools leads in 2024 (136 visits; 47% of visits) and 2025 (154; 70%). Screening leads 2026 H1 (45; 67%). Screening mentions rise from 47% of 2024 records to 57% in 2025 and 67% in 2026 H1. These are overlapping topic mentions in visit notes, not exclusive groups or demand estimates.

Source: FY2024, FY2025, and FH12026 Visit Reports.

4. The work customers bring is broader than product navigation

Valuation and Company Analysis is the leading recorded workflow in 2024 (142 visits), 2025 (114), and 2026 H1 (27). Valuation/company analysis and M&A/transactions are recurring use cases; Excel workflows are also prominent.

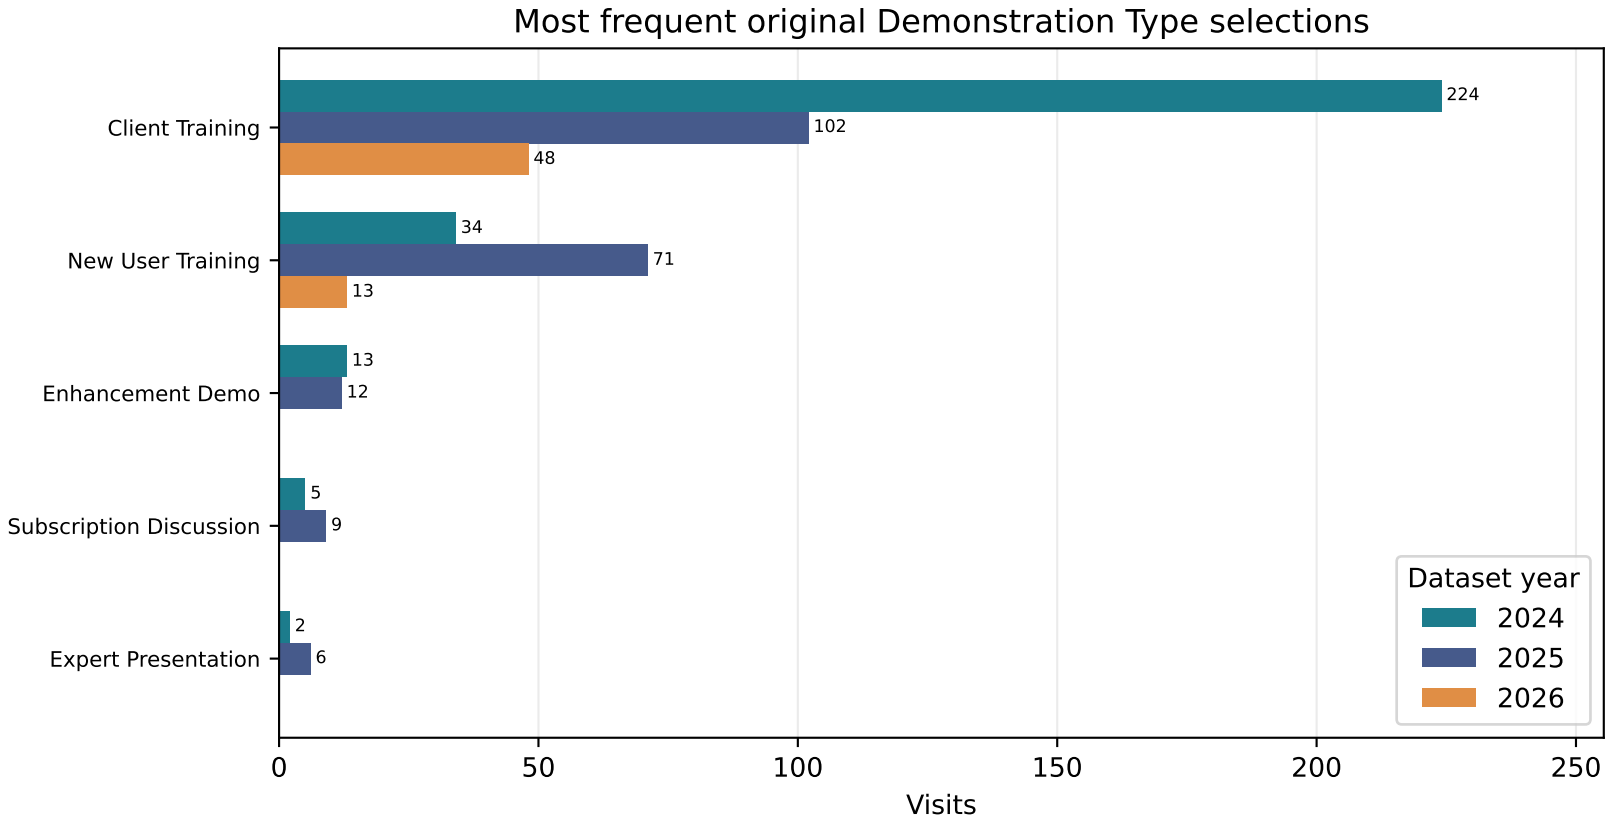

WHAT THIS MEANS

Valuation and Company Analysis appears in 142 2024 visits (49%), 114 2025 visits (52%), and 27 2026 H1 visits (40%). Its position as the top workflow is consistent, though its share of the dataset falls from about one-half in 2024–2025 to two-fifths in 2026 H1. M&A/transactions is another recurring job (76, 72, and 18 mentions, respectively). Workflow categories can overlap and 'Unspecified' is substantial, especially in 2026 (22 of 67 records).

Source: FY2024, FY2025, and FH12026 Visit Reports.

5. Training remains the dominant engagement format

The chart uses the original Demonstration Type field, preserving each selected value exactly—including combined selections such as 'Client Training; New User Training'. No derived training/demo categories are used here. The most frequent source selection is 2024: Client Training (224 visits); 2025: Client Training (102 visits); 2026: Client Training (48 visits).

Top 5 exact source selections; combined values remain intact.

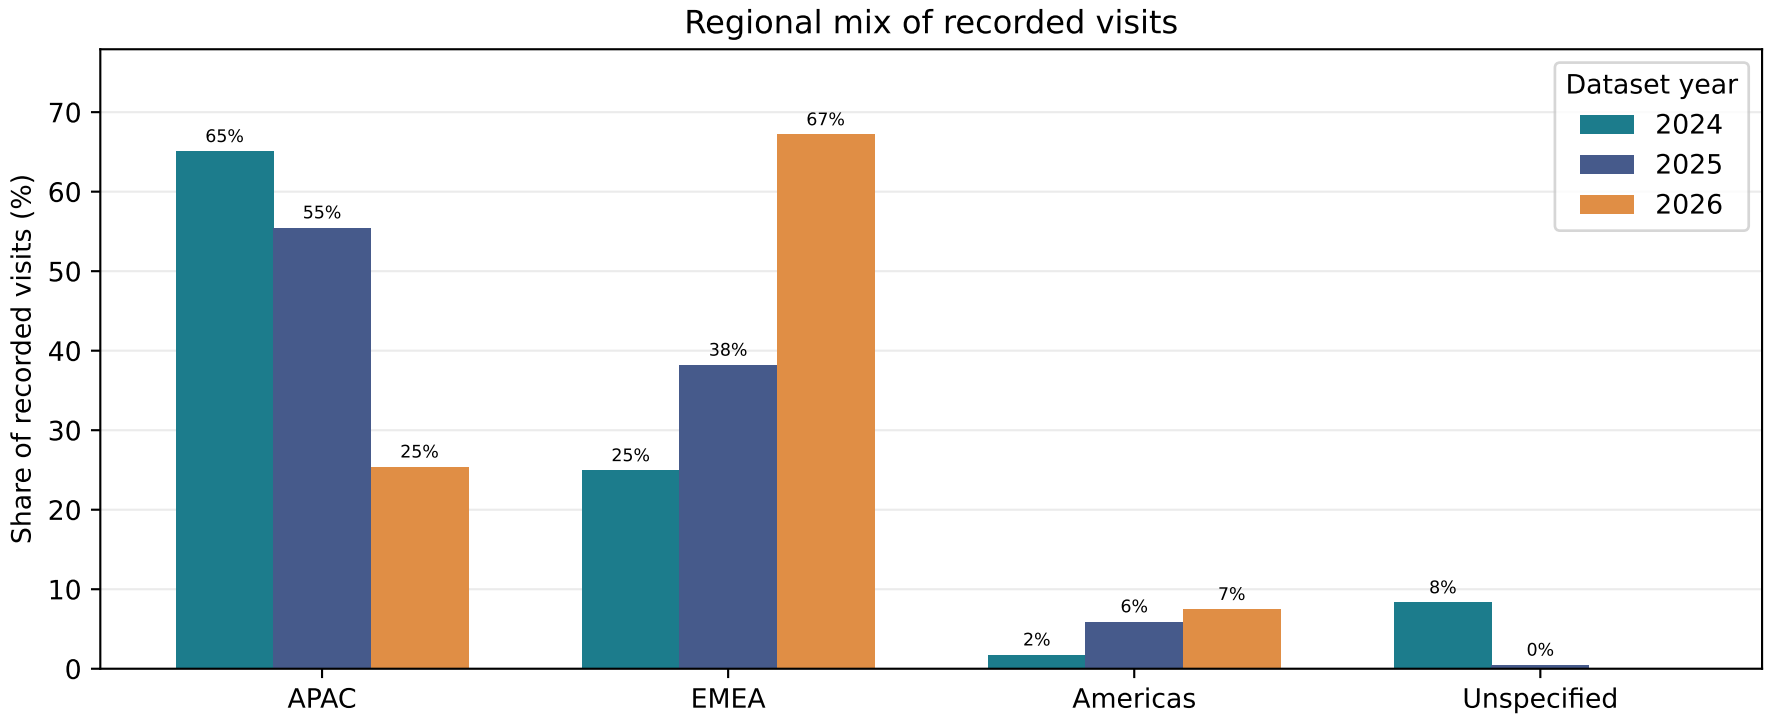

WHAT THIS MEANS

The exact values show client training and new-user training as distinct selections, with some visits carrying both. These counts describe the source selection for a visit and retain combined values as their own selections; they are not recategorized into derived demonstration groups. The exact 'Client Training' selection accounts for 78% of 2024 records, 46% of 2025 records, and 72% of 2026 H1 records. The top-five chart is a concise view; the summary CSV retains all selections.

Source: FY2024, FY2025, and FH12026 Visit Reports.

6. Regional mix shifts, while core jobs persist

The leading recorded region is 2024: APAC (188 of 289 visits, 65%); 2025: APAC (122 of 220 visits, 55%); 2026: EMEA (45 of 67 visits, 67%). Country mix also varies: 2024: Australia (41), United Kingdom (41), Singapore (33); 2025: Australia (36), United Kingdom (30), Singapore (22); 2026: United Kingdom (14), Germany (13), Hong Kong (4). Client-role classification also leaves substantial records in Other or Unspecified, so audience comparisons are less reliable than solution/workflow comparisons. 2024: 64% Other/Unspecified; 2025: 44% Other/Unspecified; 2026: 58% Other/Unspecified.

WHAT THIS MEANS

APAC's share moves from 65% in 2024 to 55% in 2025 and 25% in 2026 H1, while EMEA moves from 25% to 38% and then 67%. The region percentages use each year's total recorded visits as the denominator. They indicate where records were concentrated in each dataset, not regional market size or conversion. The 2026 EMEA majority is limited to H1 and should not be read as a full-year or permanent regional shift.

Source: FY2024, FY2025, and FH12026 Visit Reports.

7. What recorded demo volume can tell us

The three source periods contain 576 recorded visits: 289 in 2024, 220 in 2025, and 67 in 2026 H1. Visit records capture sessions that were logged; they do not contain a prospect denominator or acquisition-channel attribution.

WHAT THIS MEANS

The report can describe the mix and timing of completed, recorded sessions, including recurring topics and workflows. It cannot determine how many potential demos were missed, what caused year-to-year changes, or which outreach activity would increase bookings. Those questions require pipeline, invitation, booking, and attendance data in addition to visit reports.

Source: FY2024, FY2025, and FH12026 Visit Reports.

Method and interpretation

This report combines the cleaned 2024 and 2025 datasets with 2026 H1. Solution topics are assigned with the shared deterministic regex rules. A visit is counted once per matched topic; one visit may match multiple topics. Workflow and demonstration categories are the derived labels already present in the cleaned datasets.

WHAT THIS MEANS

Counts describe visit records, not unique customers. Multi-label topic and workflow counts can overlap. The dataset does not measure revenue, conversion, satisfaction, or whether a session caused subsequent product adoption.
